data

geom

1. Pick a **data** set

```
ggplot(data = <DATA>) +  
  <GEOM_FUNCTION>(mapping = aes(<MAPPINGS>))
```

2. Choose a **geom**
to display cases

3. **Map** aesthetic
properties to
variables

A ggplot2 template

Make any plot by filling in the parameters of this template

```
ggplot (data = <DATA>) +
  <GEOM_FUNCTION> (mapping = aes(<MAPPINGS>),
  stat = <STAT>, position = <POSITION>) +
  <COORDINATE_FUNCTION> +
  <FACET_FUNCTION> +
  <SCALE_FUNCTION> +
  <THEME_FUNCTION>
```

required

Not required, sensible defaults supplied

Data Visualization with ggplot2 : : CHEAT SHEET

The cheat sheet is organized into several sections:

- Basics:** Explains the grammar of graphics and provides a template for building a plot: `ggplot(data = <DATA>) + <GEOM_FUNCTION>(mapping = aes(<MAPPINGS>), stat = <STAT>, position = <POSITION>) + <COORDINATE_FUNCTION> + <FACET_FUNCTION> + <SCALE_FUNCTION> + <THEME_FUNCTION>`. It also includes a diagram showing the flow from data to a plot.
- Geoms:** Lists graphical primitives and line segments.
 - GRAPHICAL PRIMITIVES:** `geom_blank()`, `geom_curve()`, `geom_path()`, `geom_polygon()`, `geom_rect()`, `geom_ribbon()`.
 - LINE SEGMENTS:** `geom_abline()`, `geom_vline()`, `geom_segment()`, `geom_spoke()`.
- TWO VARIABLES:** Lists functions for continuous and discrete data.
 - continuous x, continuous y:** `geom_bin2d()`, `geom_density2d()`, `geom_jitter()`, `geom_point()`, `geom_quantile()`, `geom_smooth()`, `geom_text()`.
 - discrete x, continuous y:** `geom_bar()`, `geom_boxplot()`, `geom_dotplot()`, `geom_histogram()`, `geom_freqpoly()`, `geom_histogram()`, `geom_qq()`.
- ONE VARIABLE:** Lists functions for continuous and discrete data.
 - continuous:** `geom_area()`, `geom_density()`, `geom_density2d()`, `geom_dotplot()`, `geom_freqpoly()`, `geom_histogram()`, `geom_qq()`.
 - discrete:** `geom_bar()`.
- Discrete x, discrete y:** `geom_bar()`, `geom_boxplot()`, `geom_dotplot()`, `geom_histogram()`, `geom_freqpoly()`, `geom_histogram()`, `geom_qq()`.
- THREE VARIABLES:** `geom_bin2d()`, `geom_density2d()`, `geom_jitter()`, `geom_point()`, `geom_quantile()`, `geom_smooth()`, `geom_text()`.

Review: Basic ggplot2 viz

```
ggplot(data=bechdel) +  
  geom_bar(aes(x=clean_test, fill=clean_test)) +  
  scale_fill_brewer(palette = "Dark2")
```

```
ggplot(data = bechdel) +  
  geom_point(mapping = aes(x = budget, y = domgross))
```

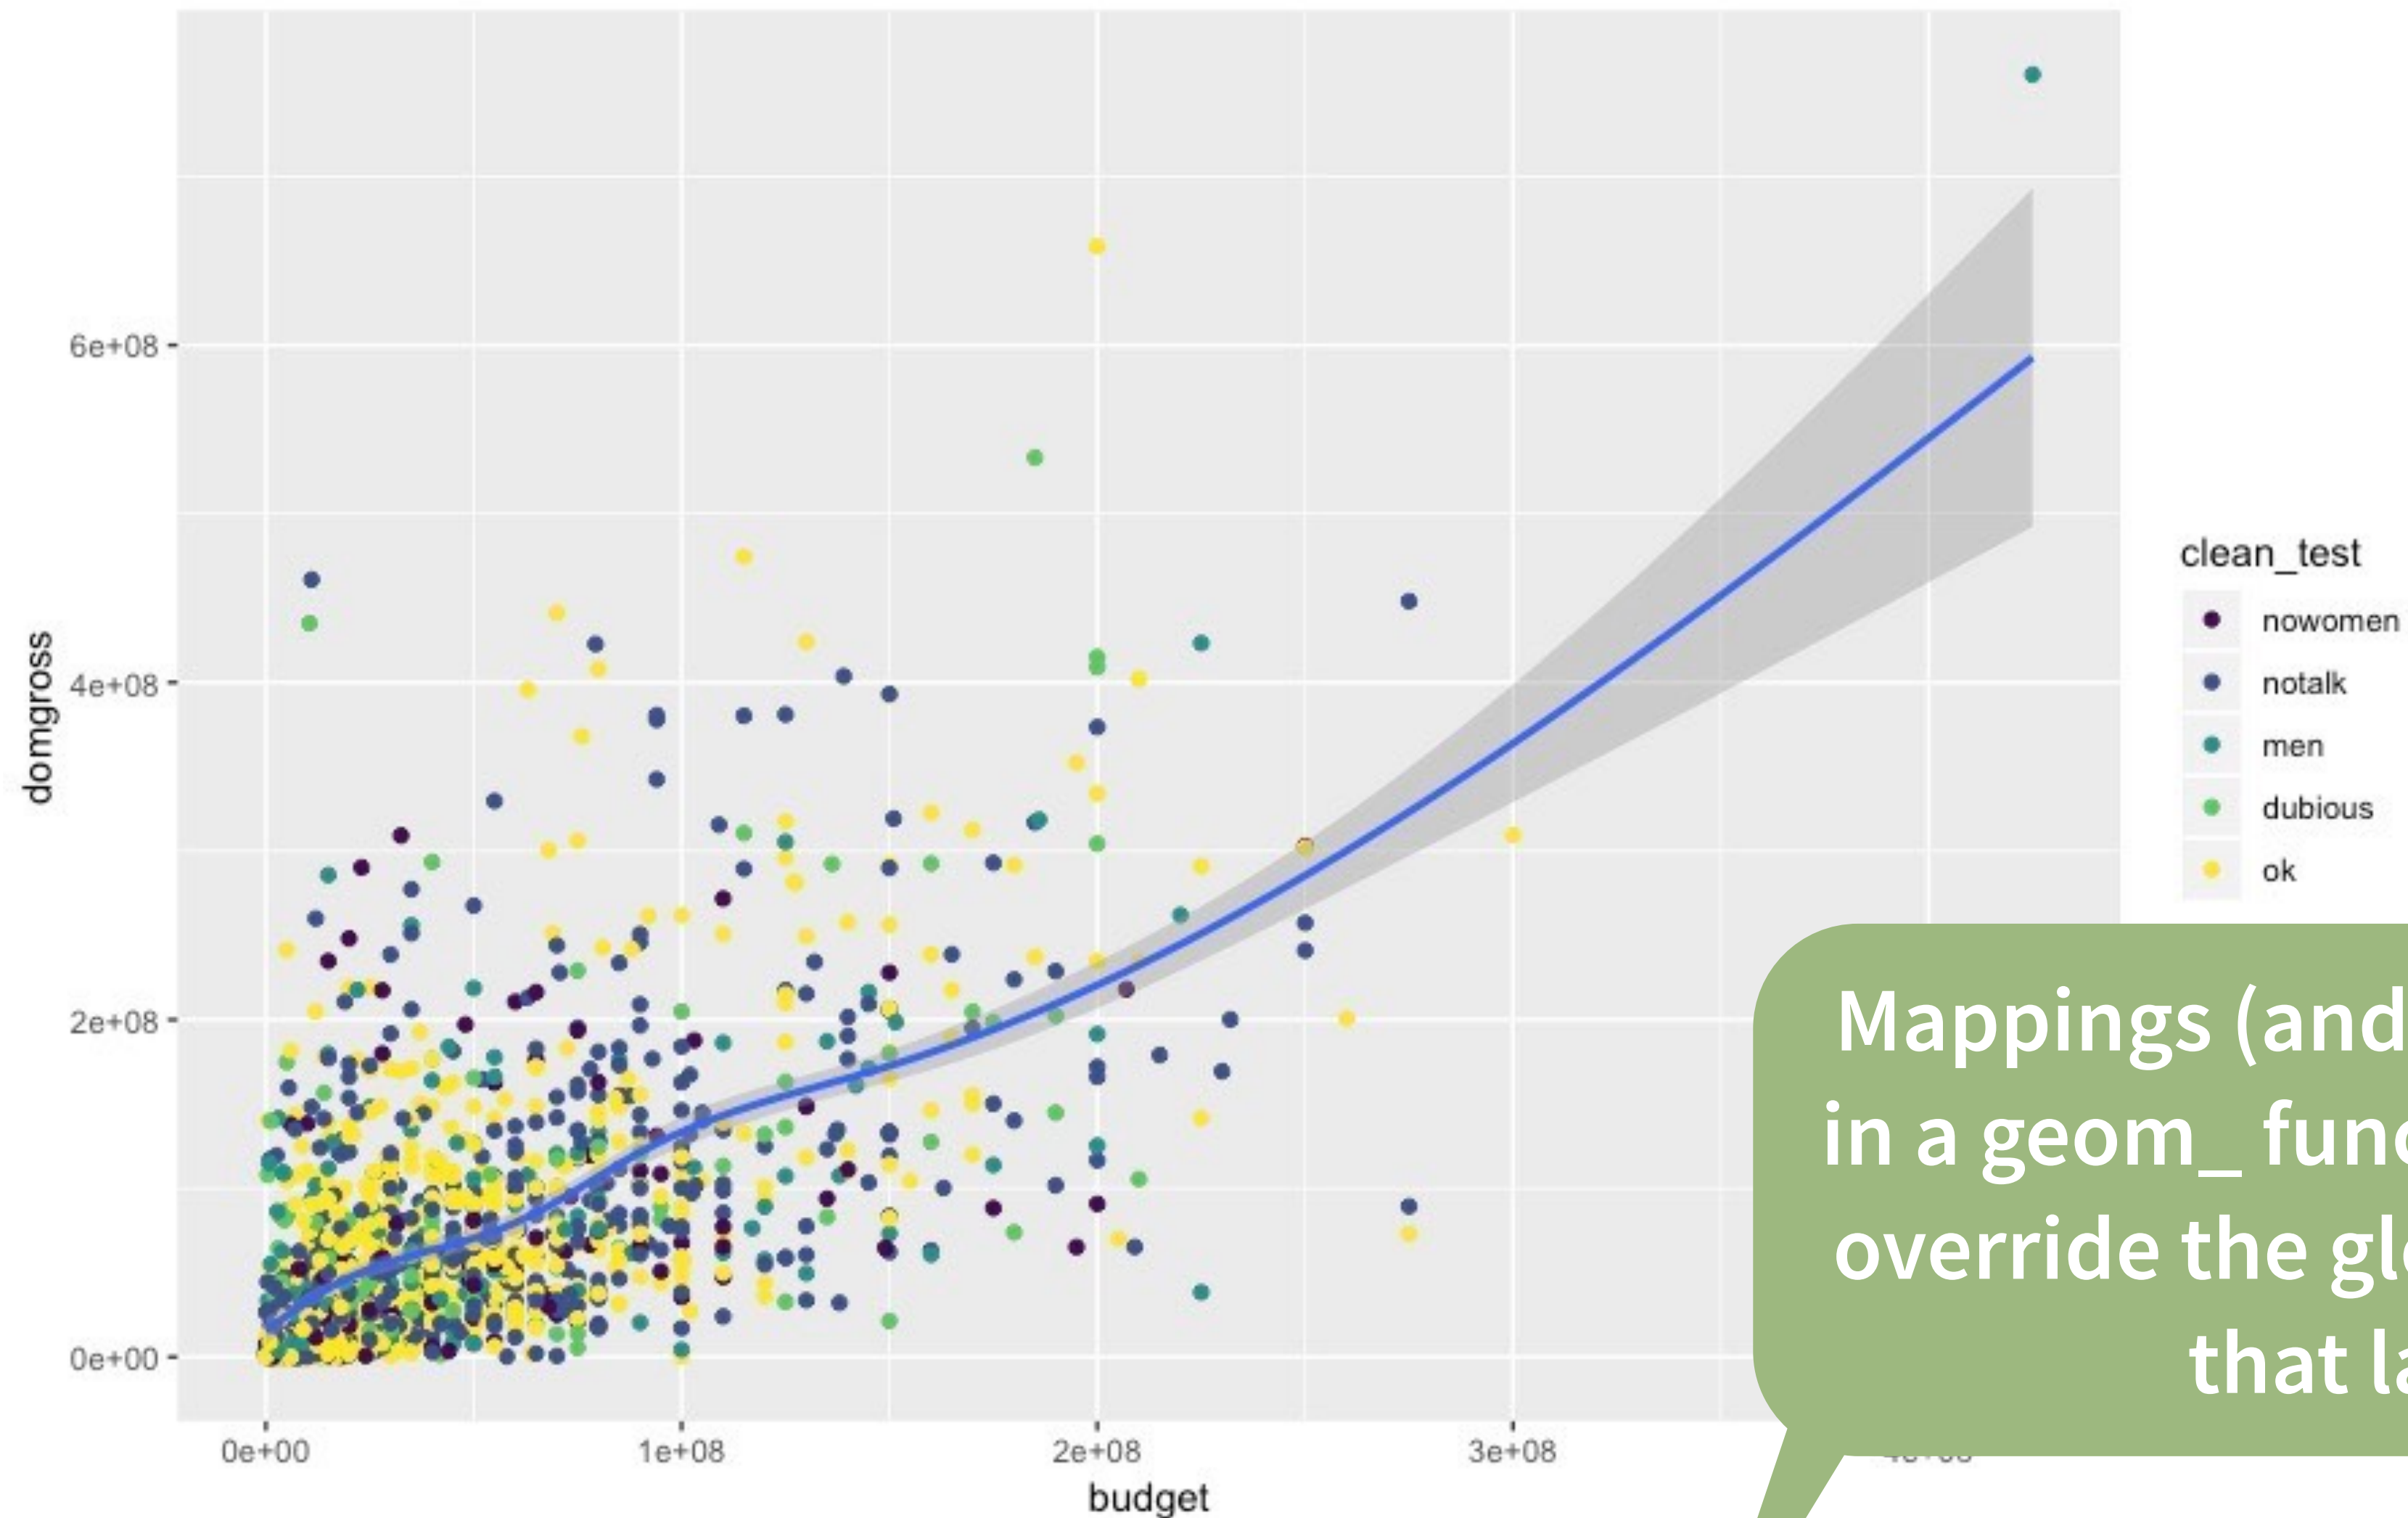

global vs. local

```
ggplot(data = bechdel, mapping = aes(x = budget, y = domgross)) +  
  geom_point() +  
  geom_smooth()
```

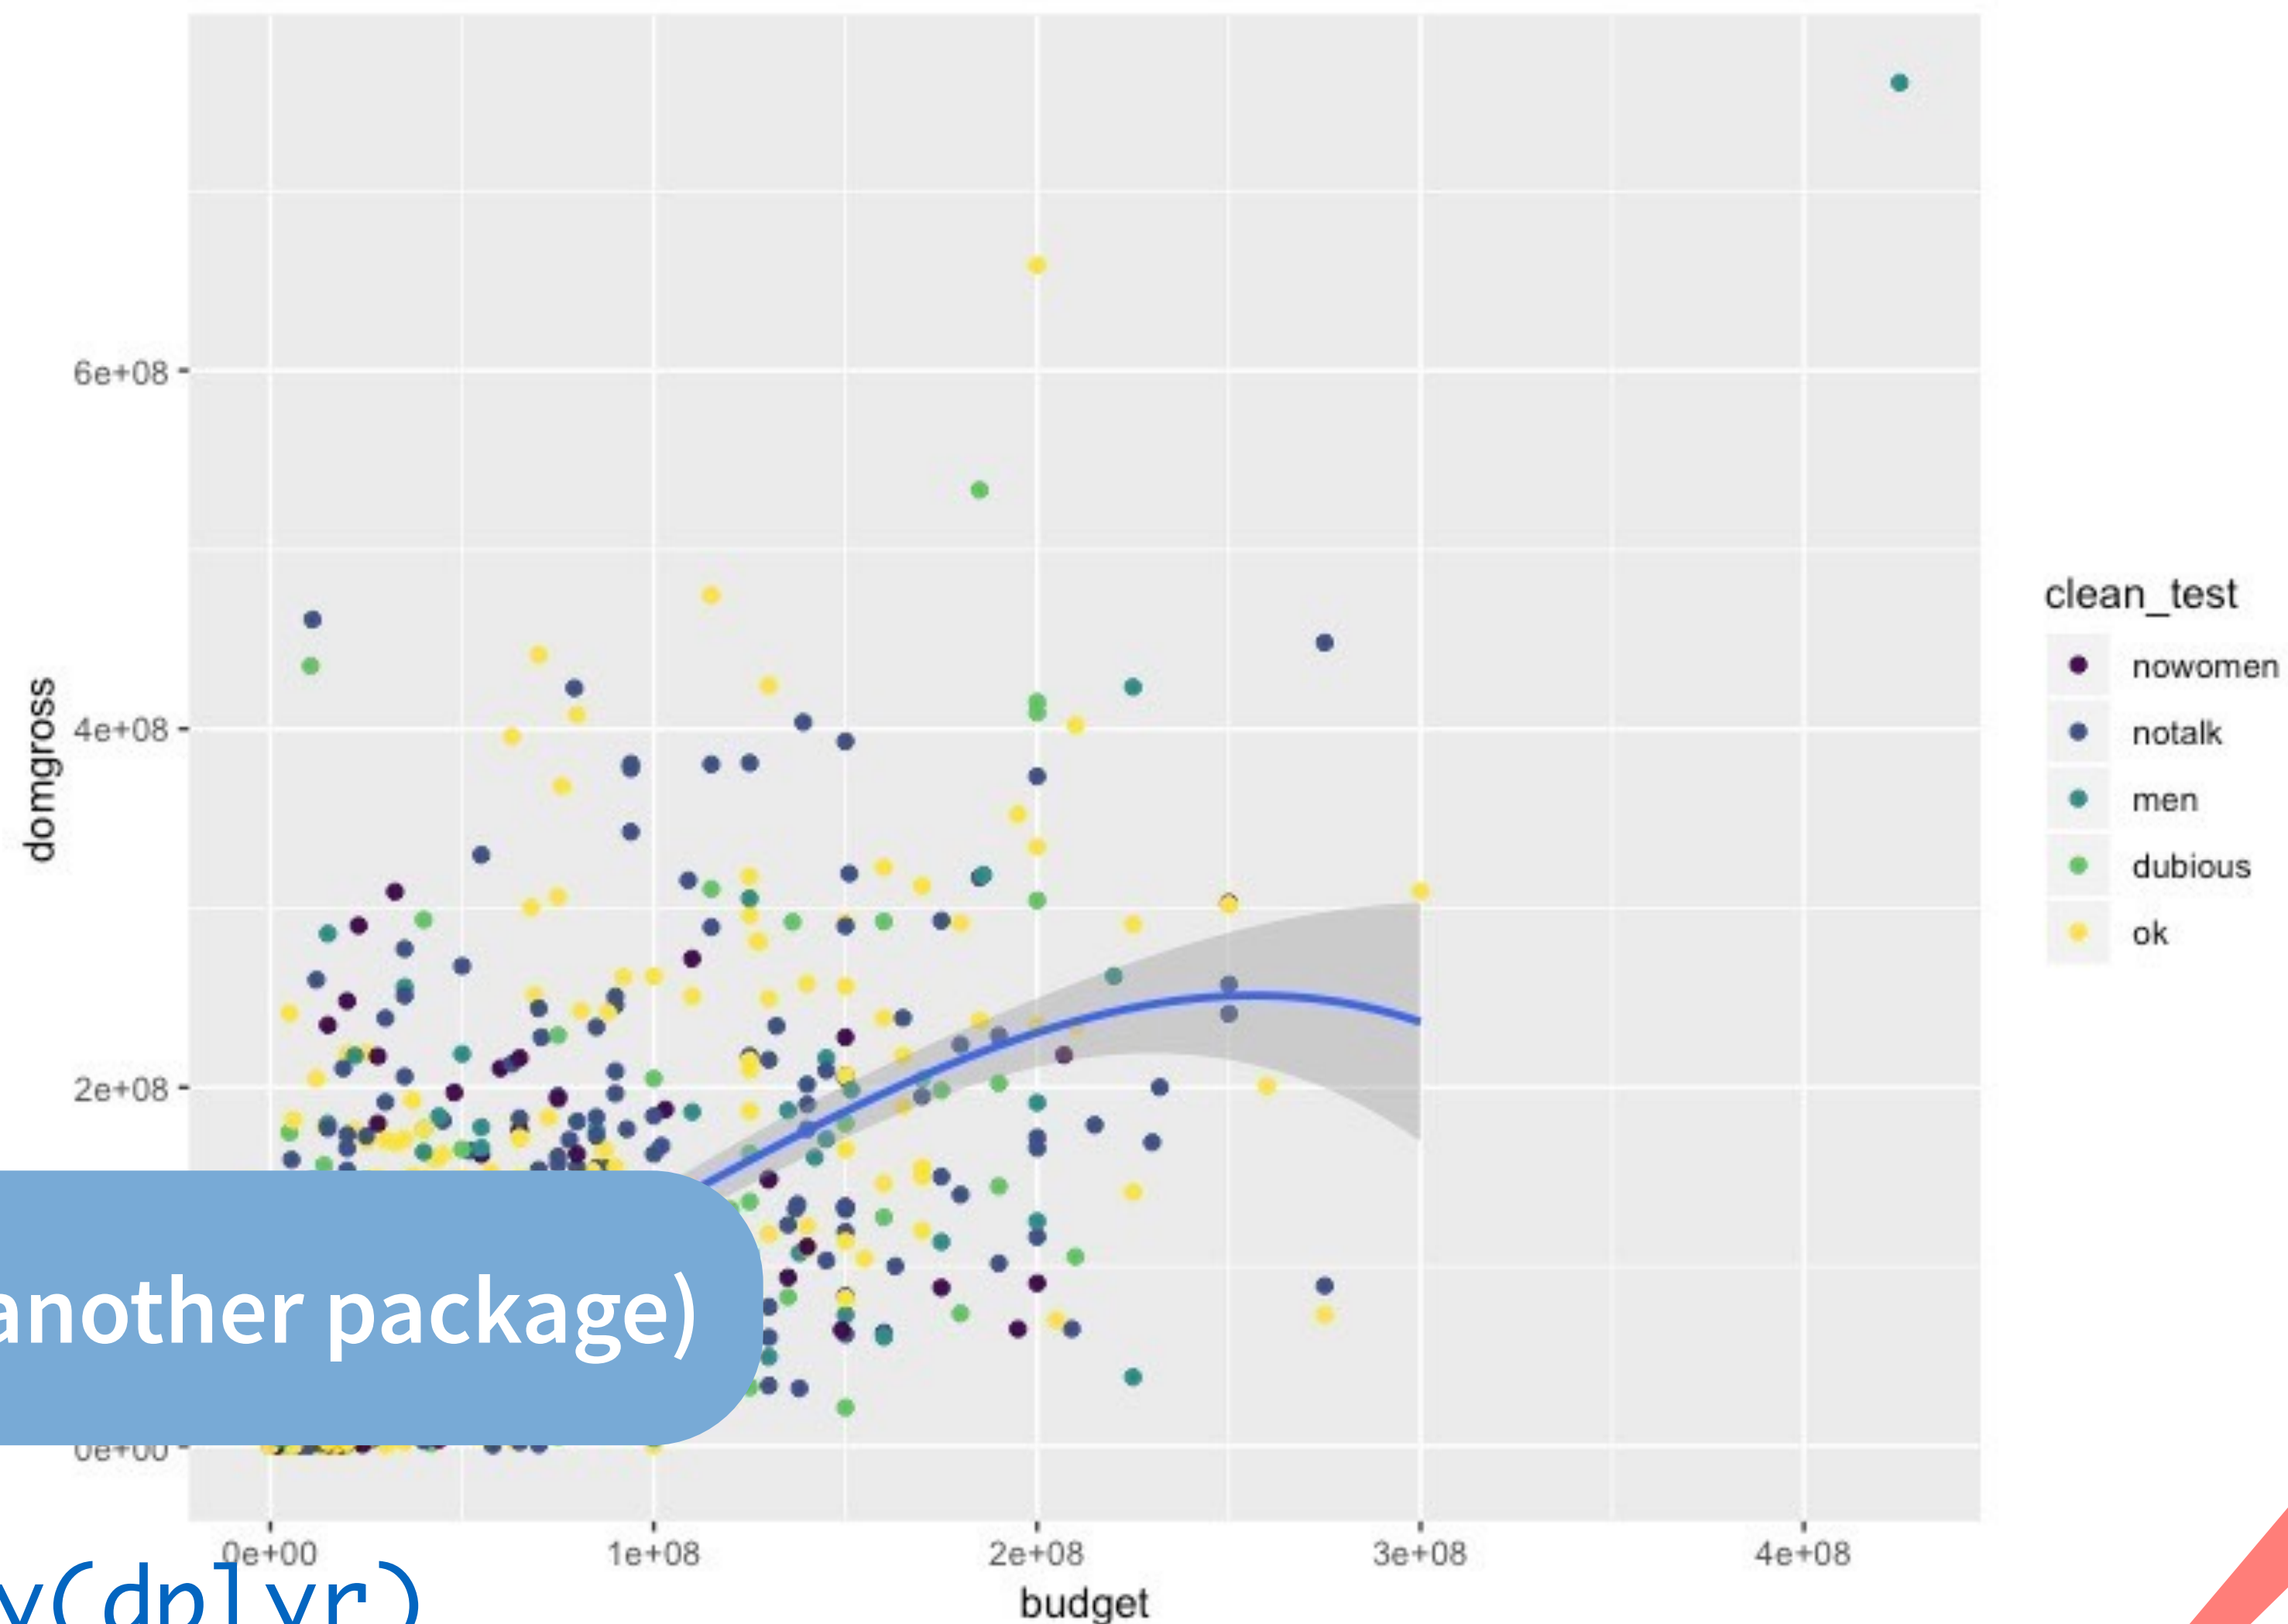

Mappings (and data) that appear in a geom_function will add to or override the global mappings for that layer only

```
ggplot(data = bechdel, mapping = aes(x = budget, y = domgross)) +  
  geom_point(mapping = aes(color = clean_test)) +  
  geom_smooth()
```

(requires another package)

`library(dplyr)`

```
ggplot(data = bechdel, mapping = aes(x = budget, y = domgross)) +
  geom_point(mapping = aes(color = clean_test)) +
  geom_smooth(data = filter(bechdel, clean_test == "ok"))
```

data can also be set locally or globally

Controlling the details

Defaults in ggplot2 were chosen based on research

- Grey background
- Light gridlines
- Colorblind-friendly color scales
- Colorscales that match continuous and discrete variables

...but we don't always want the default

Position Adjustments

How overlapping objects are arranged

Scales

Customize color scales, other mappings

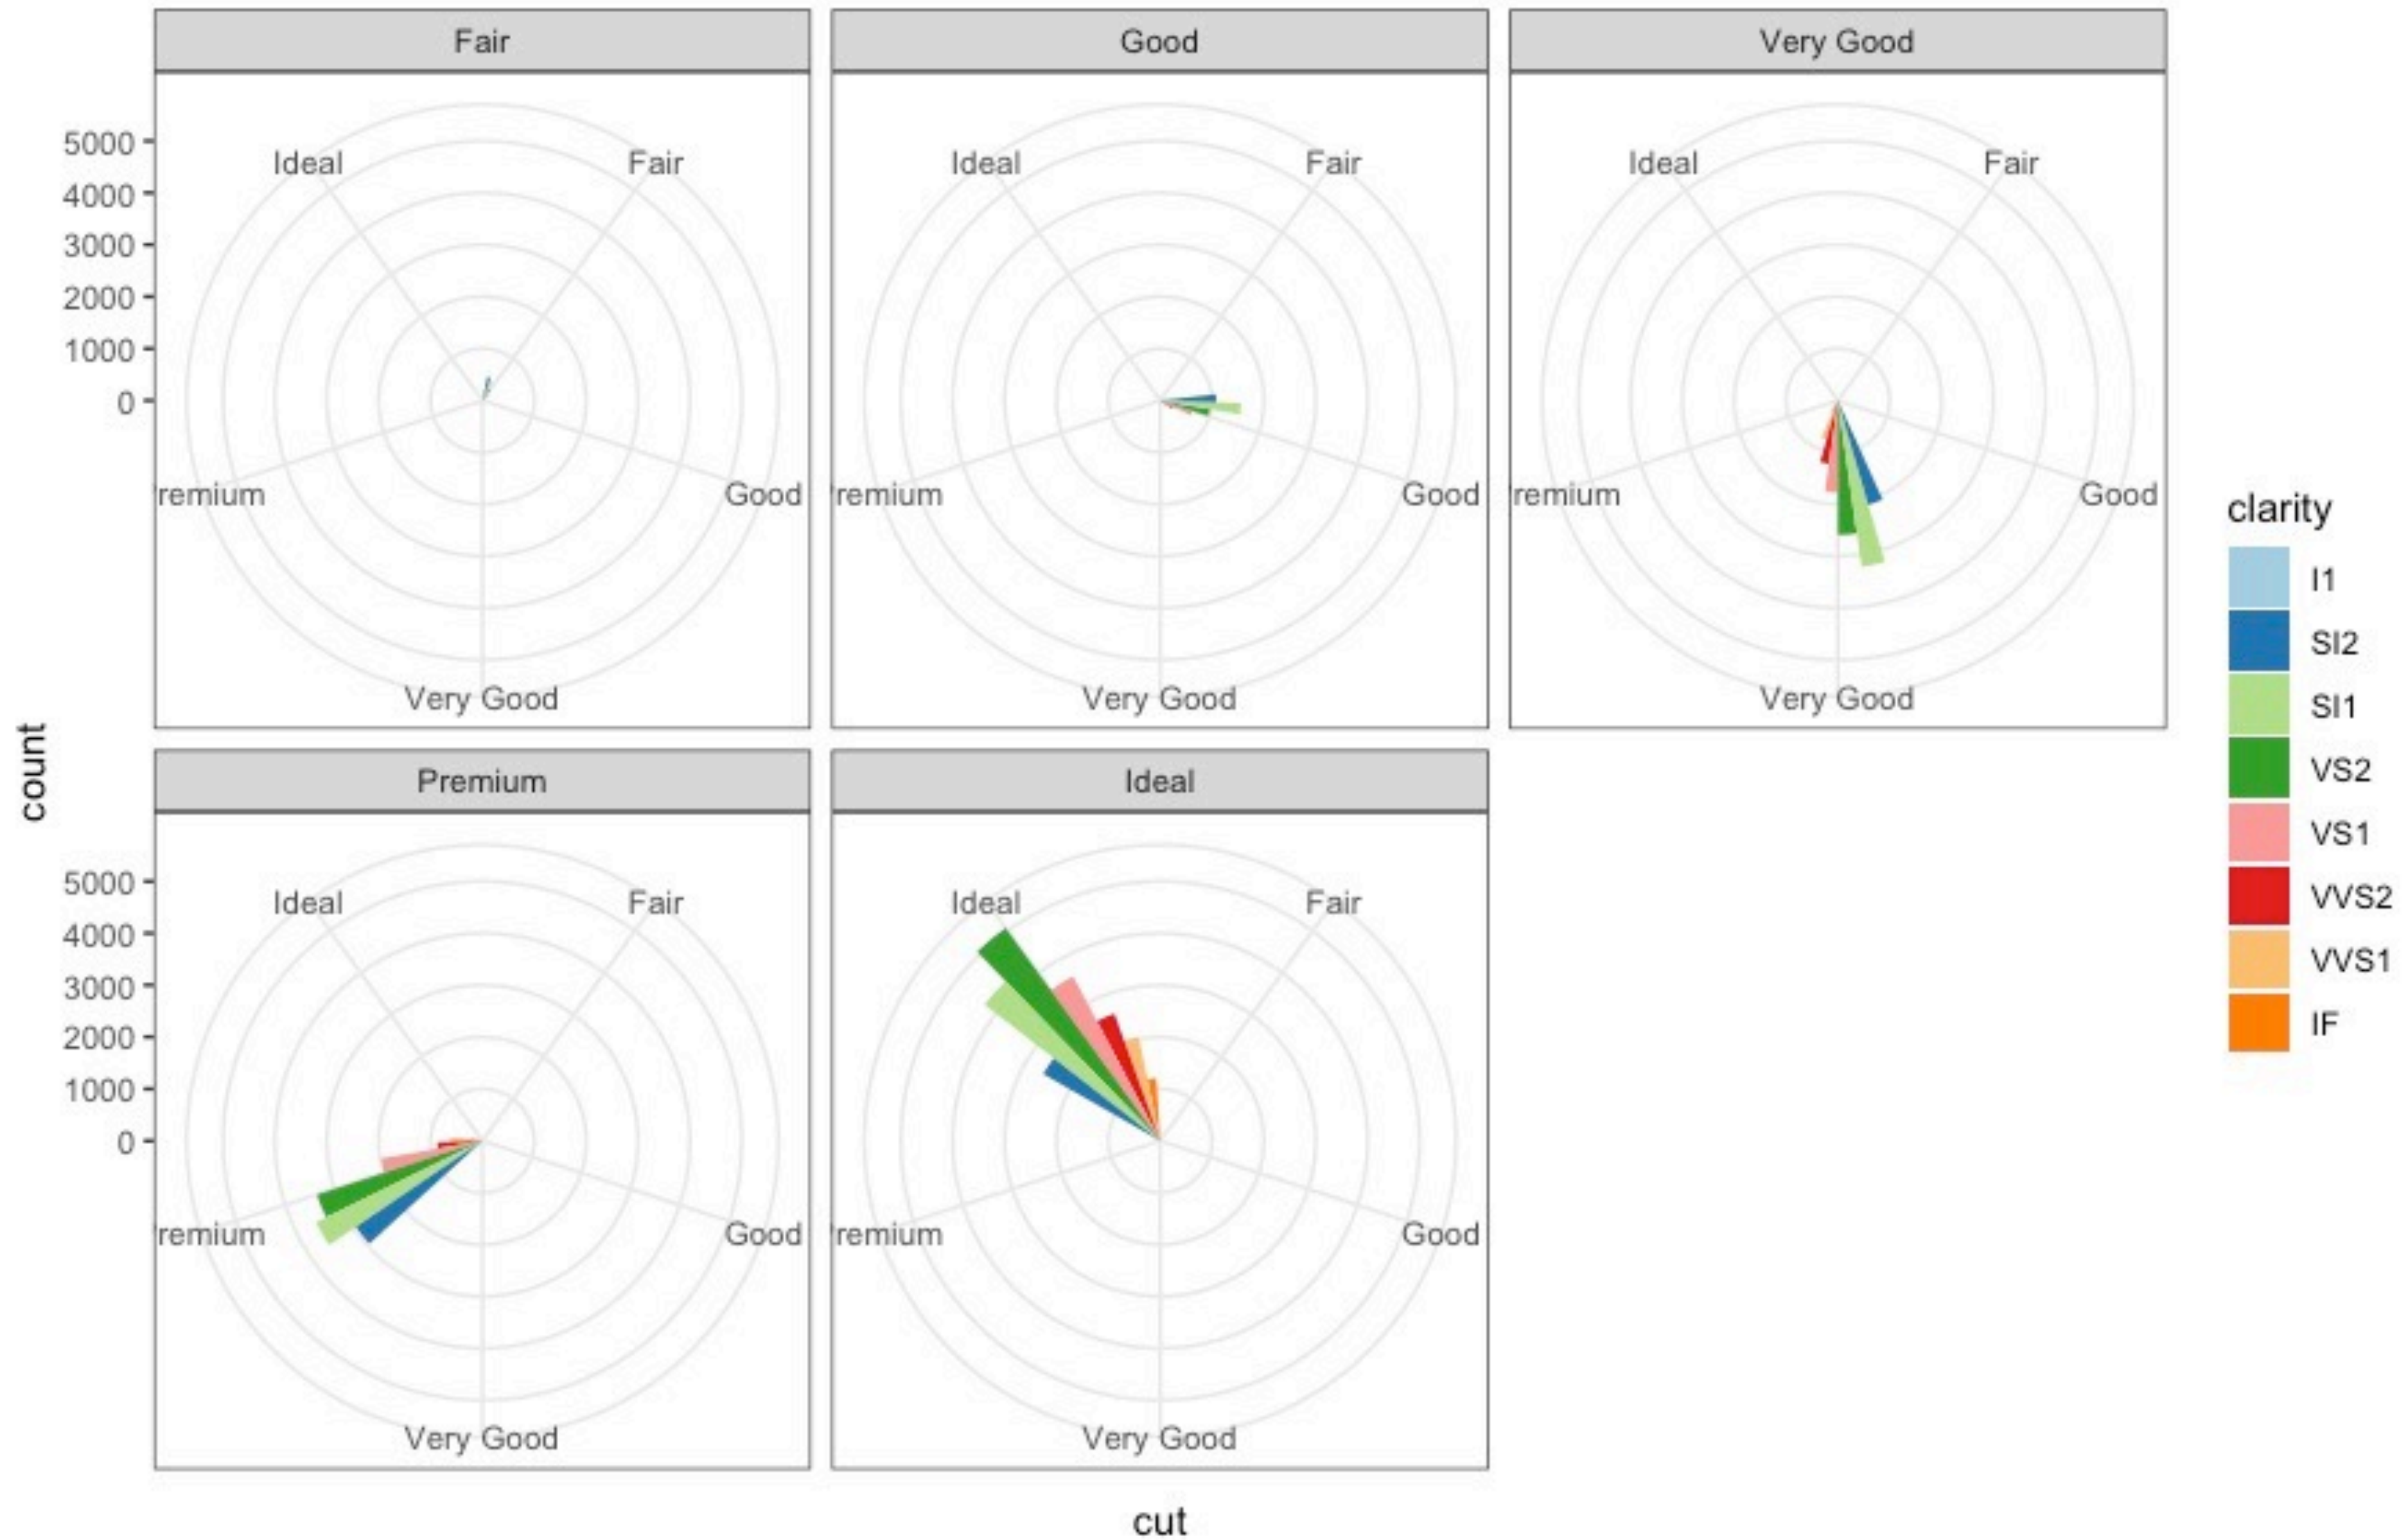

Themes

Visual appearance of non-data elements

Coordinate systems

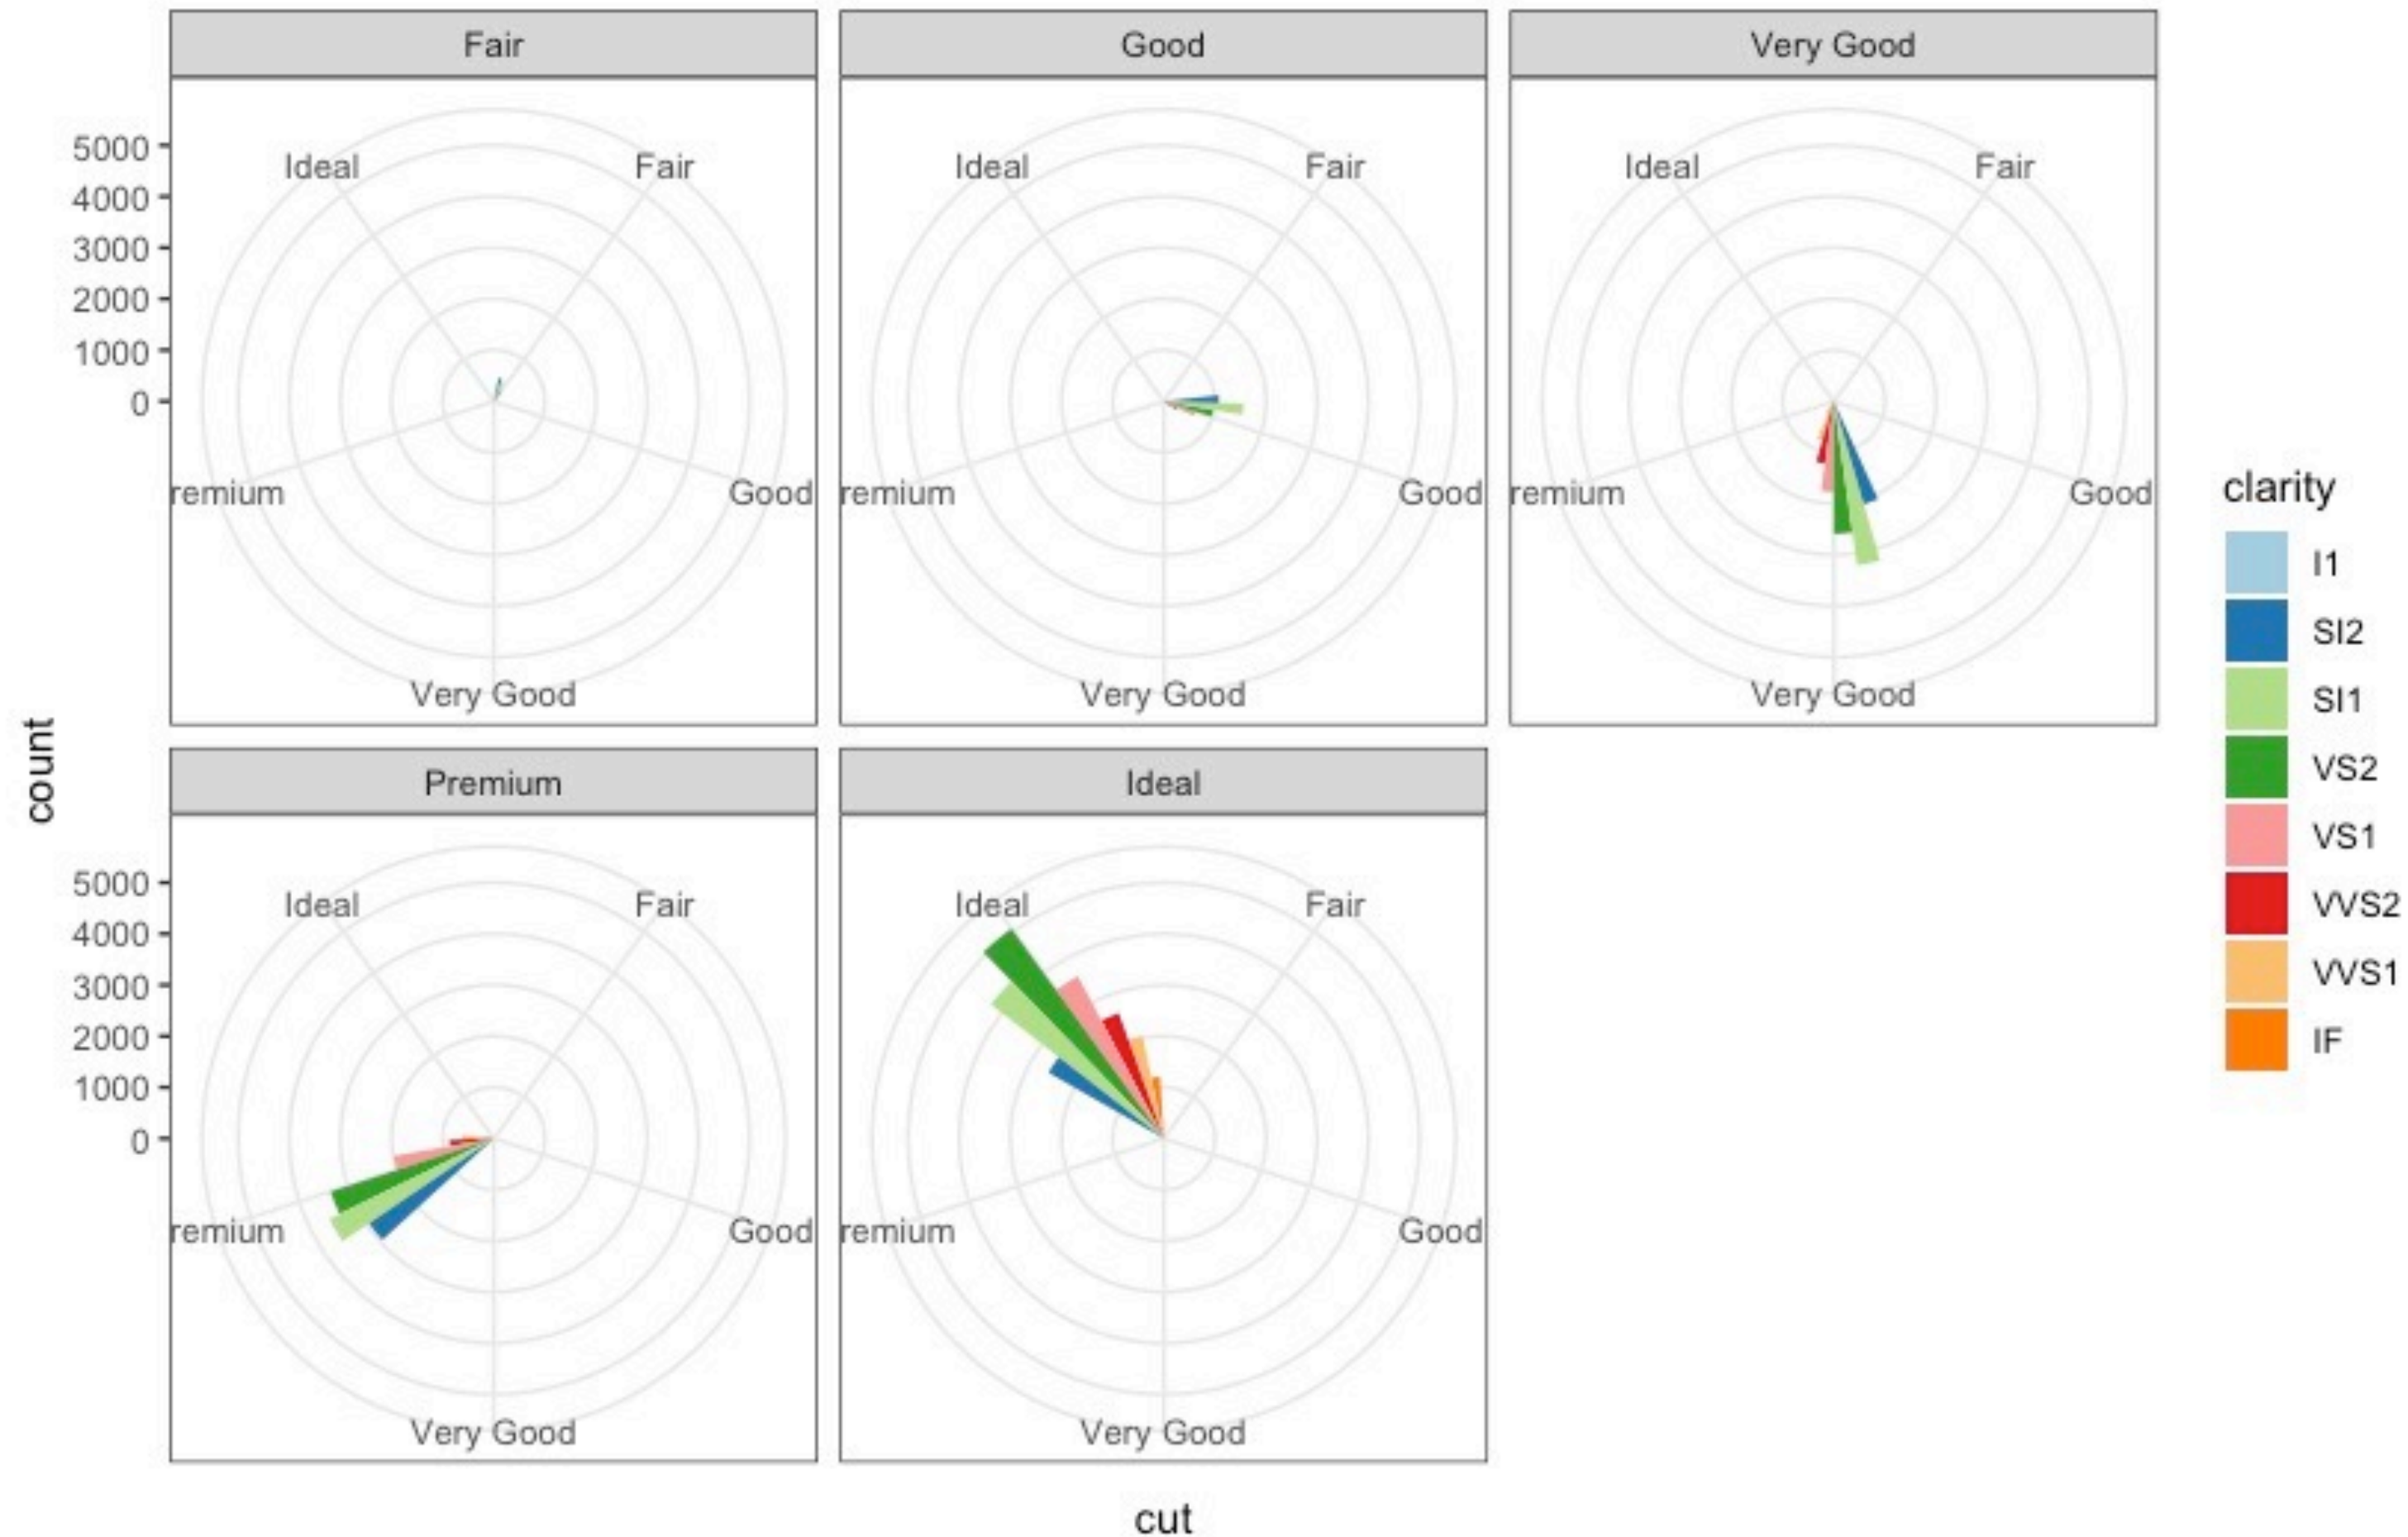

Titles and captions

Diamonds data

The data set is skewed towards ideal cut diamonds

The data is skewed toward ideal cut diamonds

Stats

An alternative way to build a layer.

A stat builds new variables to plot (e.g., count, prop).

Visualize a stat by changing the default stat of a geom function, `geom_bar(stat="count")` or by using a stat function, `stat_count(geom="bar")`, which calls a default geom to make a layer (equivalent to a geom function). Use `after_stat(name)` syntax to map the stat variable `name` to an aesthetic.

c + stat_bin(binwidth = 1, boundary = 10)
x, y | count, ncount, density, ndensity

c + stat_count(width = 1) **x, y** | count, prop

c + stat_density(adjust = 1, kernel = "gaussian")
x, y | count, density, scaled

e + stat_bin_2d(bins = 30, drop = T)
x, y, fill | count, density

e + stat_bin_hex(bins = 30) **x, y, fill** | count, density

e + stat_density_2d(contour = TRUE, n = 100)
x, y, color, size | level

e + stat_ellipse(level = 0.95, segments = 51, type = "t")

l + stat_contour(aes(z = z)) **x, y, z, order** | level

l + stat_summary_hex(aes(z = z), bins = 30, fun = max)
x, y, z, fill | value

l + stat_summary_2d(aes(z = z), bins = 30, fun = mean)
x, y, z, fill | value

f + stat_boxplot(coef = 1.5)
x, y | lower, middle, upper, width, ymin, ymax

f + stat_ydensity(kernel = "gaussian", scale = "area") **x, y** | density, scaled, count, n, violinwidth, width

e + stat_ecdf(n = 40) **x, y** | x, y

e + stat_quantile(quantiles = c(0.1, 0.9), formula = y ~ log(x), method = "rq") **x, y** | quantile

e + stat_smooth(method = "lm", formula = y ~ x, se = T, level = 0.95) **x, y** | se, x, y, ymin, ymax

ggplot() + **xlim**(-5, 5) + **stat_function**(fun = dnorm, n = 20, geom = "point") **x** | x, y

ggplot() + **stat_qq**(aes(sample = 1:100))
x, y, sample | sample, theoretical

e + stat_sum(**x, y, size**) | n, prop

e + stat_summary(fun.data = "mean_cl_boot")

h + stat_summary_bin(fun = "mean", geom = "bar")

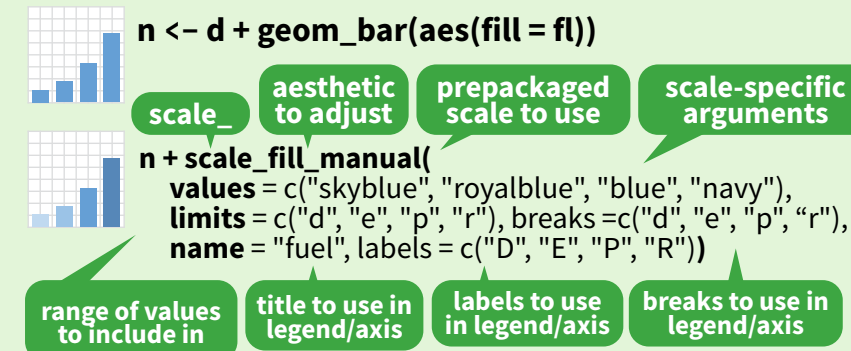

e + stat_identity()

e + stat_unique()

Scales

Override defaults with `scales` package.

Scales map data values to the visual values of an aesthetic. To change a mapping, add a new scale.

GENERAL PURPOSE SCALES

Use with most aesthetics

scale_*_continuous() - Map cont' values to visual ones.

scale_*_discrete() - Map discrete values to visual ones.

scale_*_binned() - Map continuous values to discrete bins.

scale_*_identity() - Use data values as visual ones.

scale_*_manual(values = c()) - Map discrete values to manually chosen visual ones.

scale_*_date(date_labels = "%m/%d", date_breaks = "2 weeks") - Treat data values as dates.

scale_*_datetime() - Treat data values as date times. Same as `scale_*_date`. See `?strptime` for label formats.

X & Y LOCATION SCALES

Use with x or y aesthetics (x shown here)

scale_x_log10() - Plot x on log10 scale.

scale_x_reverse() - Reverse the direction of the x axis.

scale_x_sqrt() - Plot x on square root scale.

COLOR AND FILL SCALES (DISCRETE)

n + scale_fill_brewer(palette = "Blues")

For palette choices:
`RColorBrewer::display.brewer.all()`

n + scale_fill_grey(start = 0.2, end = 0.8, na.value = "red")

COLOR AND FILL SCALES (CONTINUOUS)

o <- c + geom_dotplot(aes(fill = x))

o + scale_fill_distiller(palette = "Blues")

o + scale_fill_gradient(low = "red", high = "yellow")

o + scale_fill_gradient2(low = "red", high = "blue", mid = "white", midpoint = 25)

o + scale_fill_gradientn(colors = topo.colors(6))

Also: `rainbow()`, `heat.colors()`, `terrain.colors()`, `cm.colors()`, `RColorBrewer::brewer.pal()`

o + scale_fill_gradientn(colors = topo.colors(6))

Also: `rainbow()`, `heat.colors()`, `terrain.colors()`, `cm.colors()`, `RColorBrewer::brewer.pal()`

SHAPE AND SIZE SCALES

p <- e + geom_point(aes(shape = fl, size = cyl))

p + scale_shape() + **scale_size**()

p + scale_shape_manual(values = c(3:7))

p + scale_size_manual(values = c(3:7))

p + scale_size(range = c(1,6))

p + scale_size_area(max_size = 6)

Coordinate Systems

r <- d + geom_bar()

r + coord_cartesian(xlim = c(0, 5)) - xlim, ylim
The default cartesian coordinate system.

r + coord_fixed(ratio = 1/2)
ratio, xlim, ylim - Cartesian coordinates with fixed aspect ratio between x and y units.

r + coord_flip()
Flip cartesian coordinates by switching x and y aesthetic mappings.

r + coord_polar(theta = "x", direction=1)
theta, start, direction - Polar coordinates.

r + coord_trans(y = "sqrt") - x, y, xlim, ylim
Transformed cartesian coordinates. Set `xtrans` and `ytrans` to the name of a window function.

π + coord_quickmap()

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

π + coord_map(projection = "ortho", orientation = c(41, -74, 0)) - projection, xlim, ylim
Map projections from the `mapproj` package (mercator (default), `azequalarea`, `lagrange`, etc.).

Faceting

Facets divide a plot into subplots based on the values of one or more discrete variables.

t <- ggplot(mpg, aes(cty, hwy)) + **geom_point**()

t + facet_grid(. ~ fl)
Facet into columns based on fl.

t + facet_grid(year ~ .)
Facet into rows based on year.

t + facet_grid(year ~ fl)
Facet into both rows and columns.

t + facet_wrap(~ fl)
Wrap facets into a rectangular layout.

Set `scales` to let axis limits vary across facets.

t + facet_grid(drv ~ fl, scales = "free")
x and y axis limits adjust to individual facets:

"free_x" - x axis limits adjust

"free_y" - y axis limits adjust

Set `labeller` to adjust facet label:

t + facet_grid(. ~ fl, labeller = label_both)

fl: c **fl: d** **fl: e** **fl: p** **fl: r**

t + facet_grid(fl ~ ., labeller = label_bquote(alpha ^ .(fl)))

α^c α^d α^e α^p α^r

Use `labs` to label the elements of your plot.

t + labs(x = "New x axis label", y = "New y axis label", title = "Add a title above the plot", subtitle = "Add a subtitle below title", caption = "Add a caption below plot", alt = "Add alt text to the plot", <AES> = "New <AES> legend title")

t + annotate(geom = "text", x = 8, y = 9, label = "A")
Places a geom with manually selected aesthetics.

p + guides(x = guide_axis(n.dodge = 2)) Avoid crowded or overlapping labels with `guide_axis`(n.dodge or angle).

n + guides(fill = "none") Set legend type for each aesthetic: colorbar, legend, or none (no legend).

n + theme(legend.position = "bottom")
Place legend at "bottom", "top", "left", or "right".

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name = "Title", labels = c("A", "B", "C", "D", "E"))
Set legend title and labels with a scale function.

n + scale_fill_discrete(name

COPY THE MASTERS

- You are (eventually) going to reproduce a plot made by the folks at FiveThirtyEight
- This is a hard assignment for two reasons
 1. There are lots of finicky settings for all sorts of plot details
 2. Data needs to be in the right format before you can easily plot it

Brainstorm:
what does the
dataset that
produced this
graph look like?

New Comic Book Characters Introduced Per Year

Your Turn 1

Open `comic_characters.qmd`

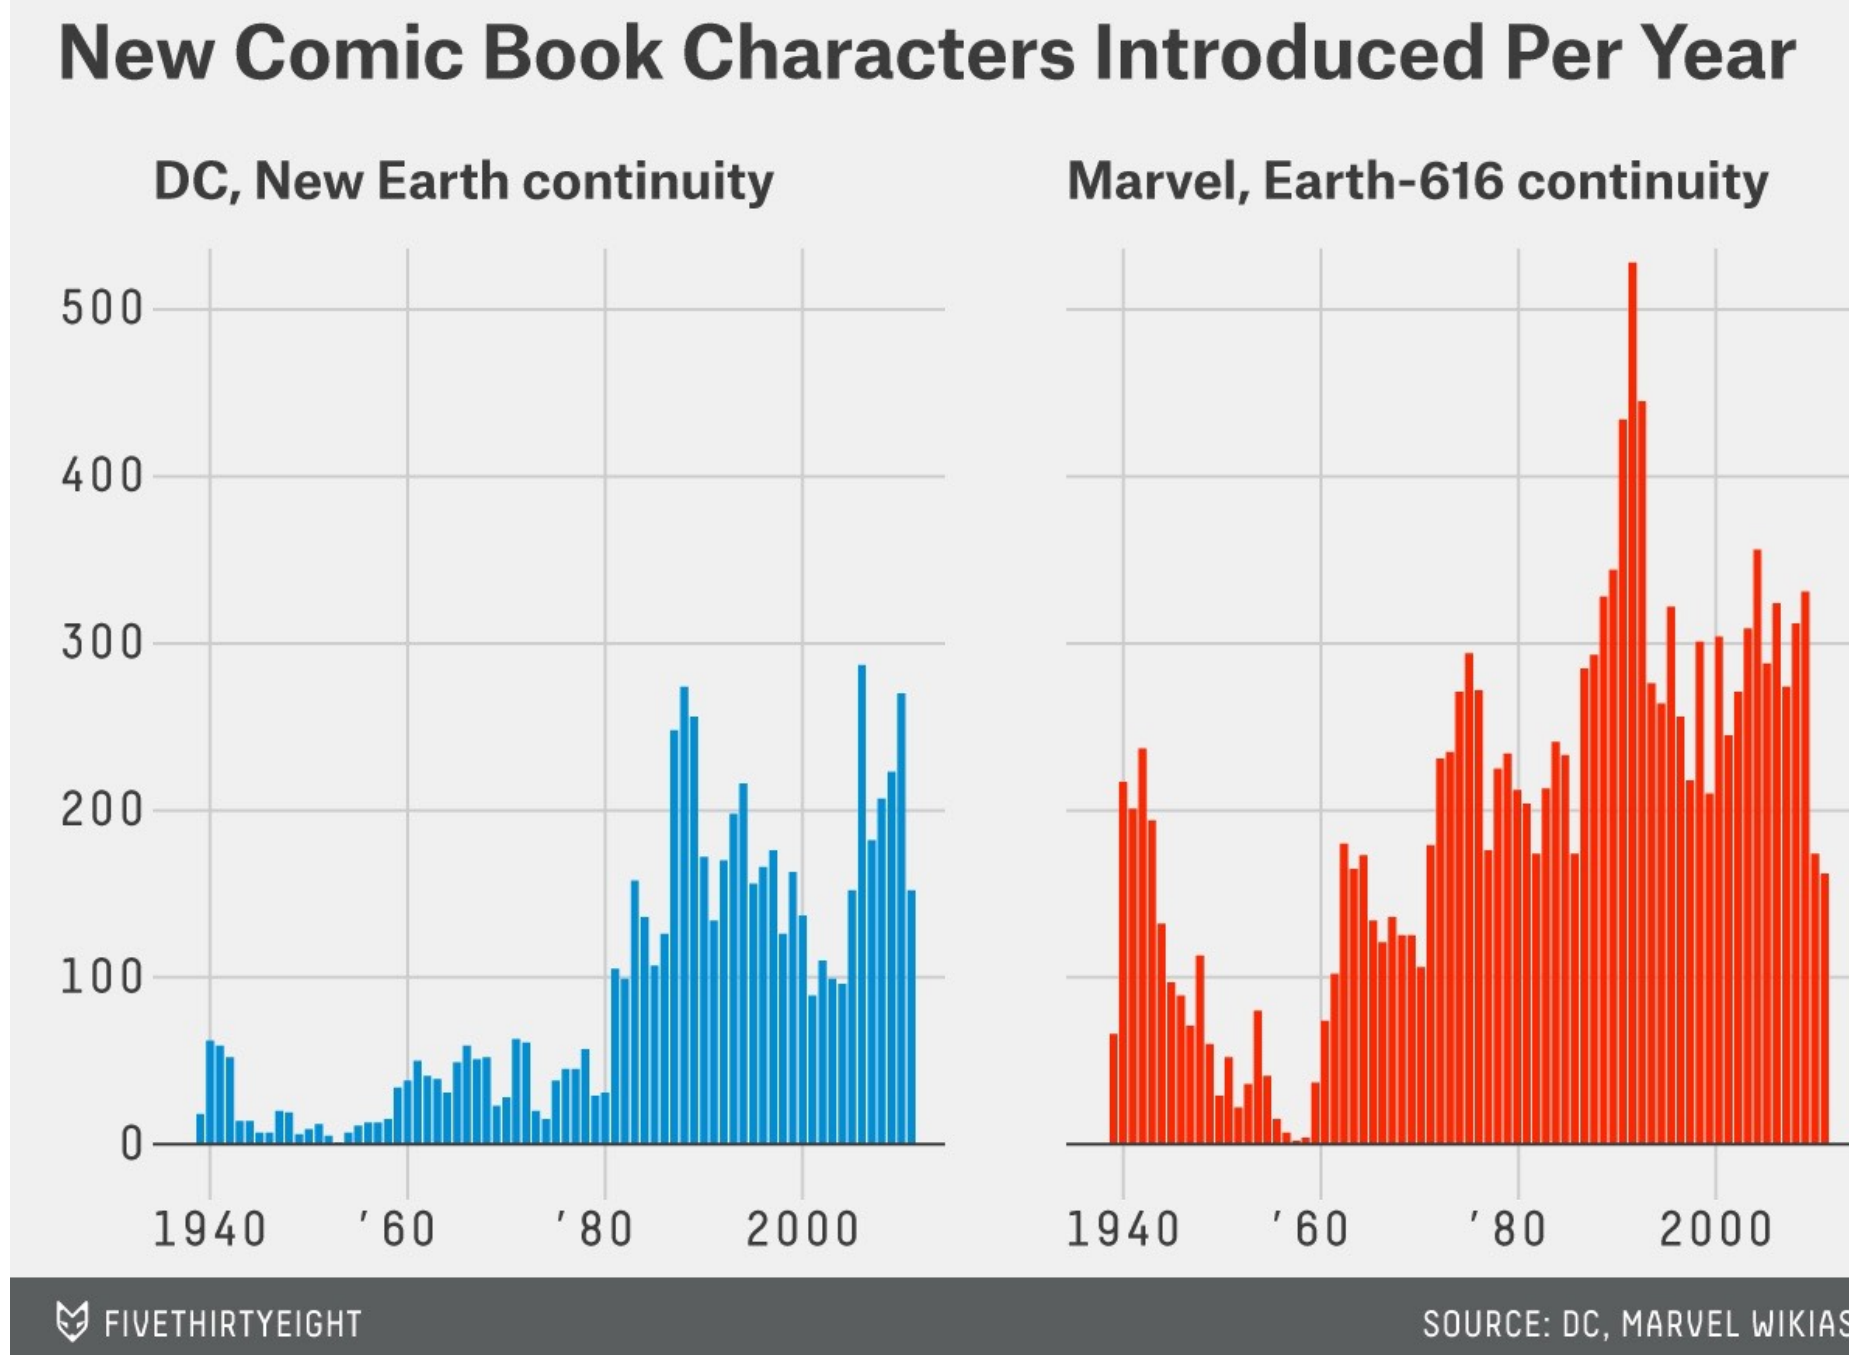

Read through the data-wrangling code, and make comments where you don't understand what's happening.

	name	publisher	year
1	Batman (Bruce Wayne)	DC	1939
2	Superman (Clark Kent)	DC	1986
3	Green Lantern (Hal Jordan)	DC	1959
4	James Gordon (New Earth)	DC	1987
5	Richard Grayson (New Earth)	DC	1940
6	Wonder Woman (Diana Prince)	DC	1941
7	Aquaman (Arthur Curry)	DC	1941
8	Timothy Drake (New Earth)	DC	1989
9	Dinah Laurel Lance (New Earth)	DC	1969
10	Flash (Barry Allen)	DC	1956
11	GenderTest	DC	1956
12	Alan Scott (New Earth)	DC	1940
13	Barbara Gordon (New Earth)	DC	1967
14	Jason Garrick (New Earth)	DC	1940

Brainstorm: what would the pseudocode look like?

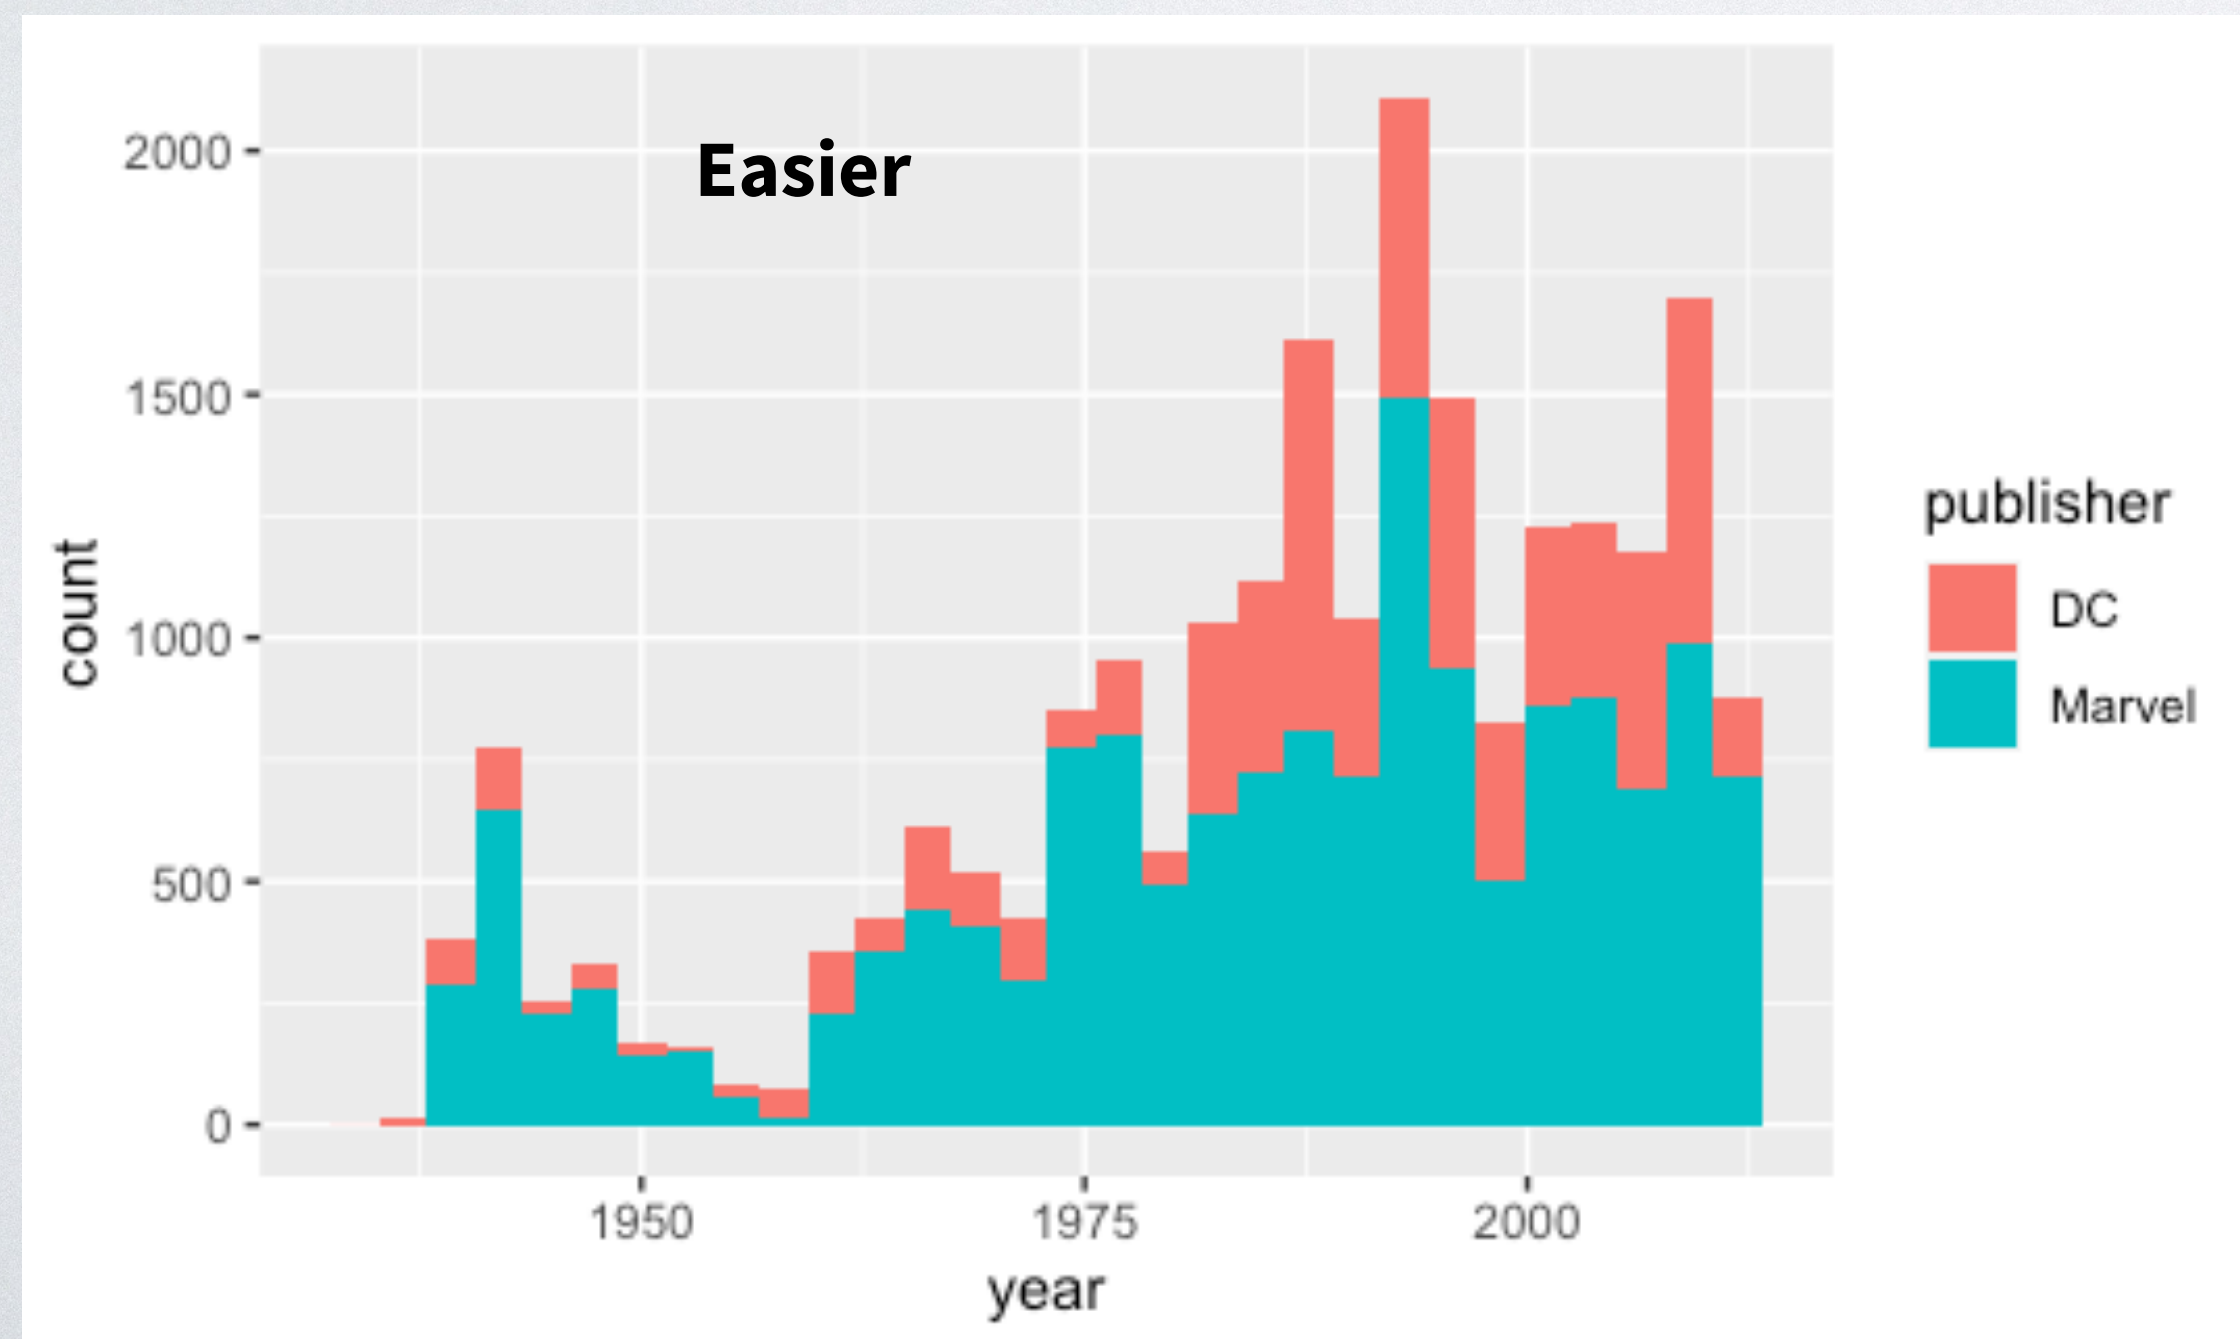

```
ggplot(data = <DATA>) +  
  <GEOM_FUNCTION>(mapping = aes(<MAPPINGS>))
```

	name	publisher	year
1	Batman (Bruce Wayne)	DC	1939
2	Superman (Clark Kent)	DC	1938
3	Green Lantern (Hal Jordan)	DC	1940
4	James Gordon (New Earth)	DC	1987
5	Richard Grayson (New Earth)	DC	1940
6	Wonder Woman (Diana Prince)	DC	1941
7	Aquaman (Arthur Curry)	DC	1941
8	Timothy Drake (New Earth)	DC	1989
9	Dinah Laurel Lance (New Earth)	DC	1969
10	Flash (Barry Allen)	DC	1956
11	GenderTest	DC	1956
12	Alan Scott (New Earth)	DC	1940
13	Barbara Gordon (New Earth)	DC	1967
14	Jason Garrick (New Earth)	DC	1940

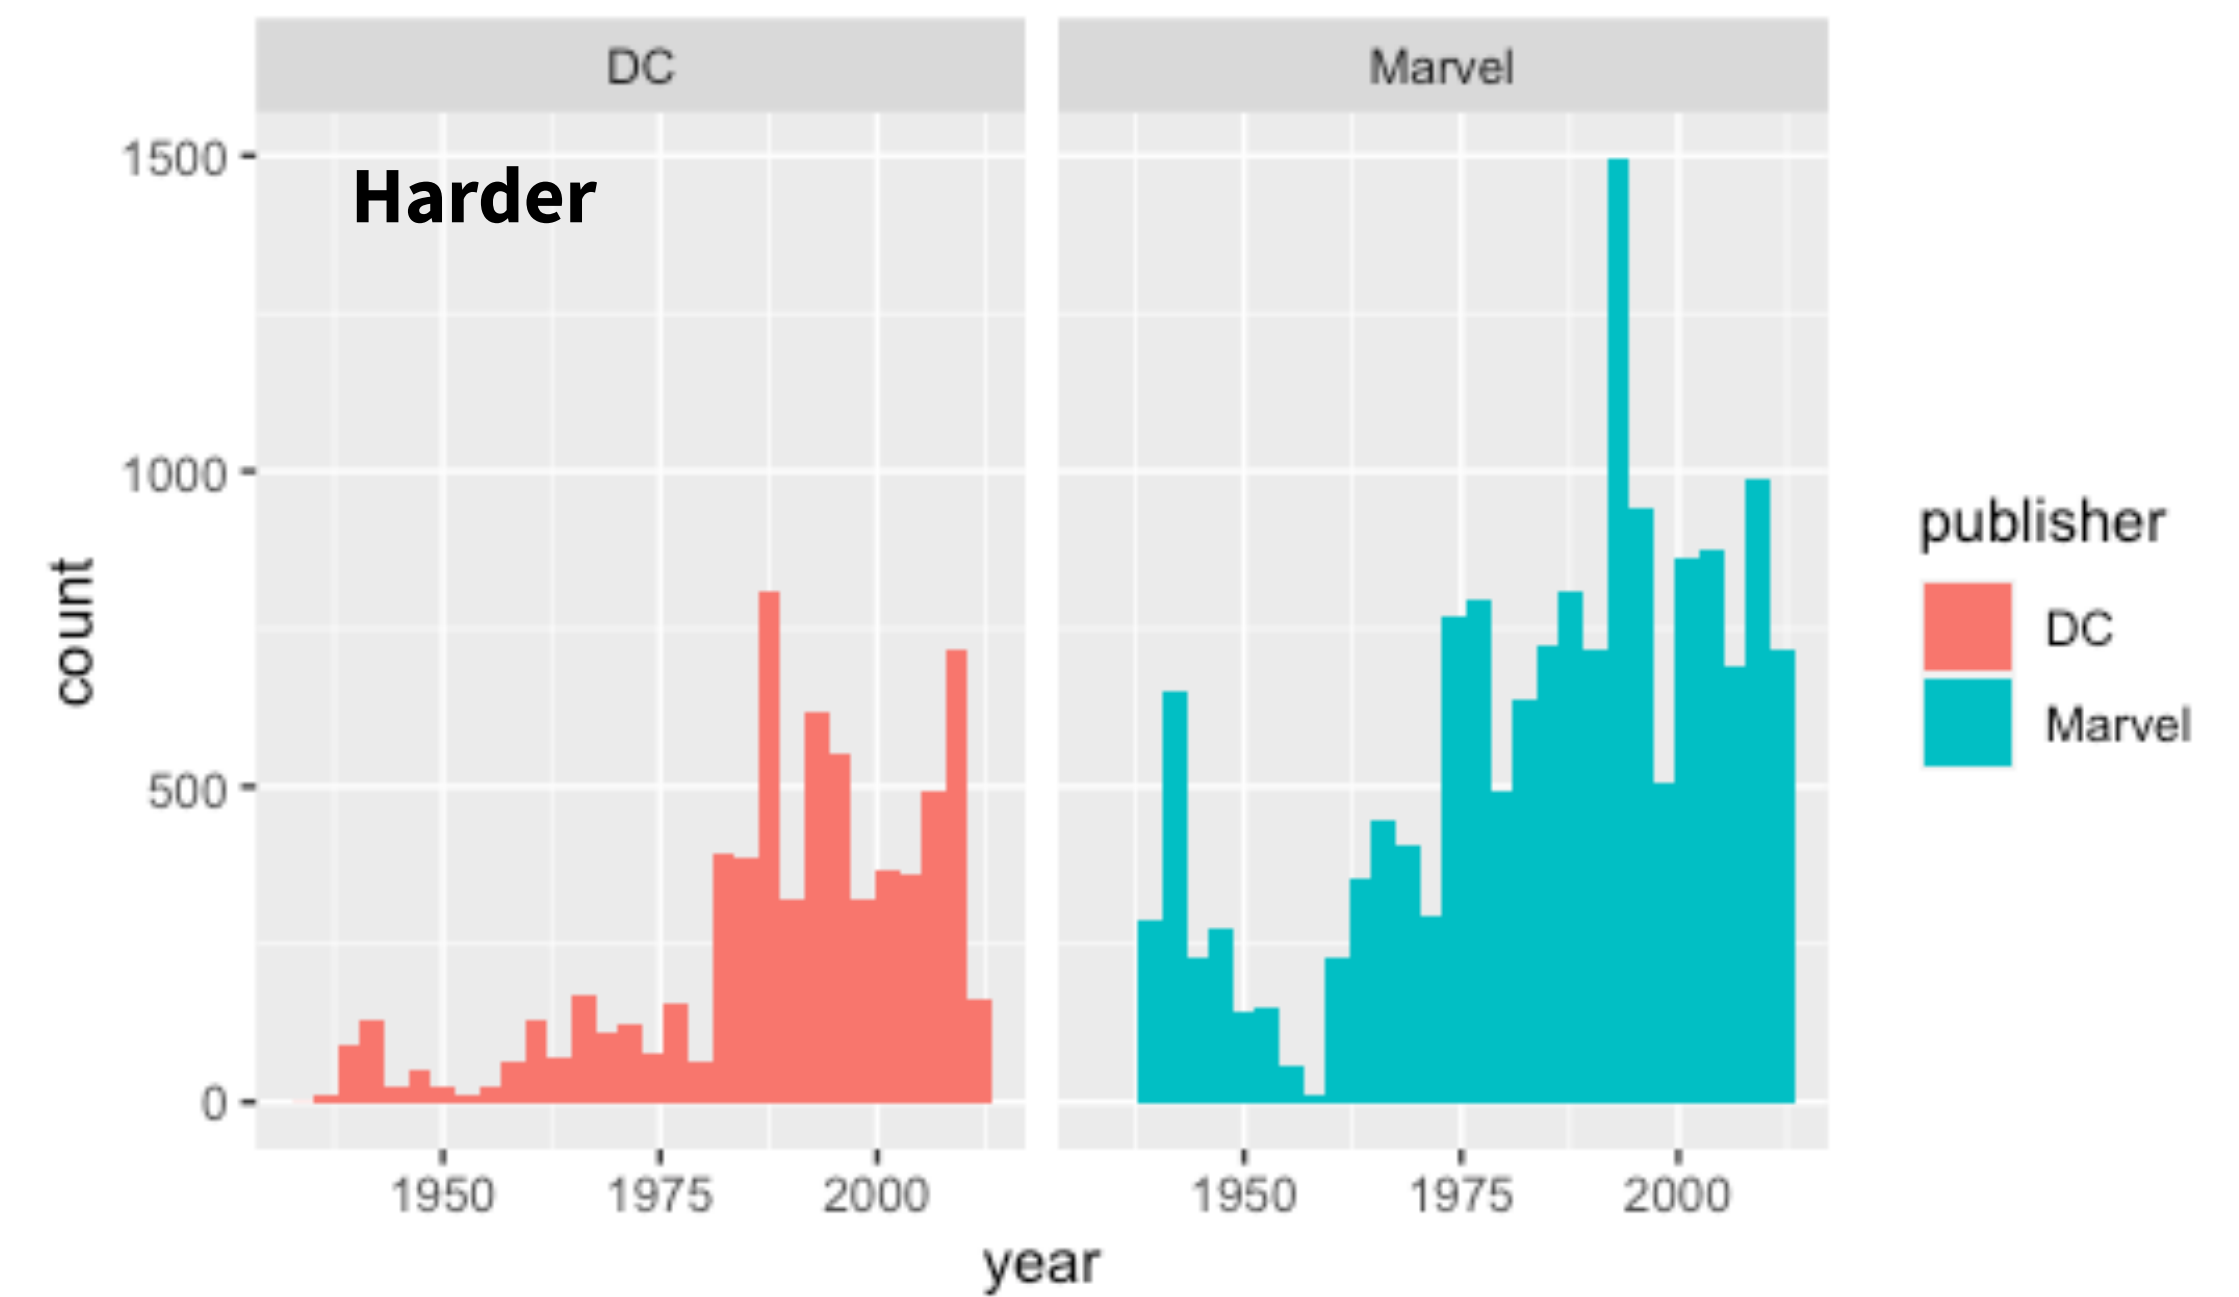

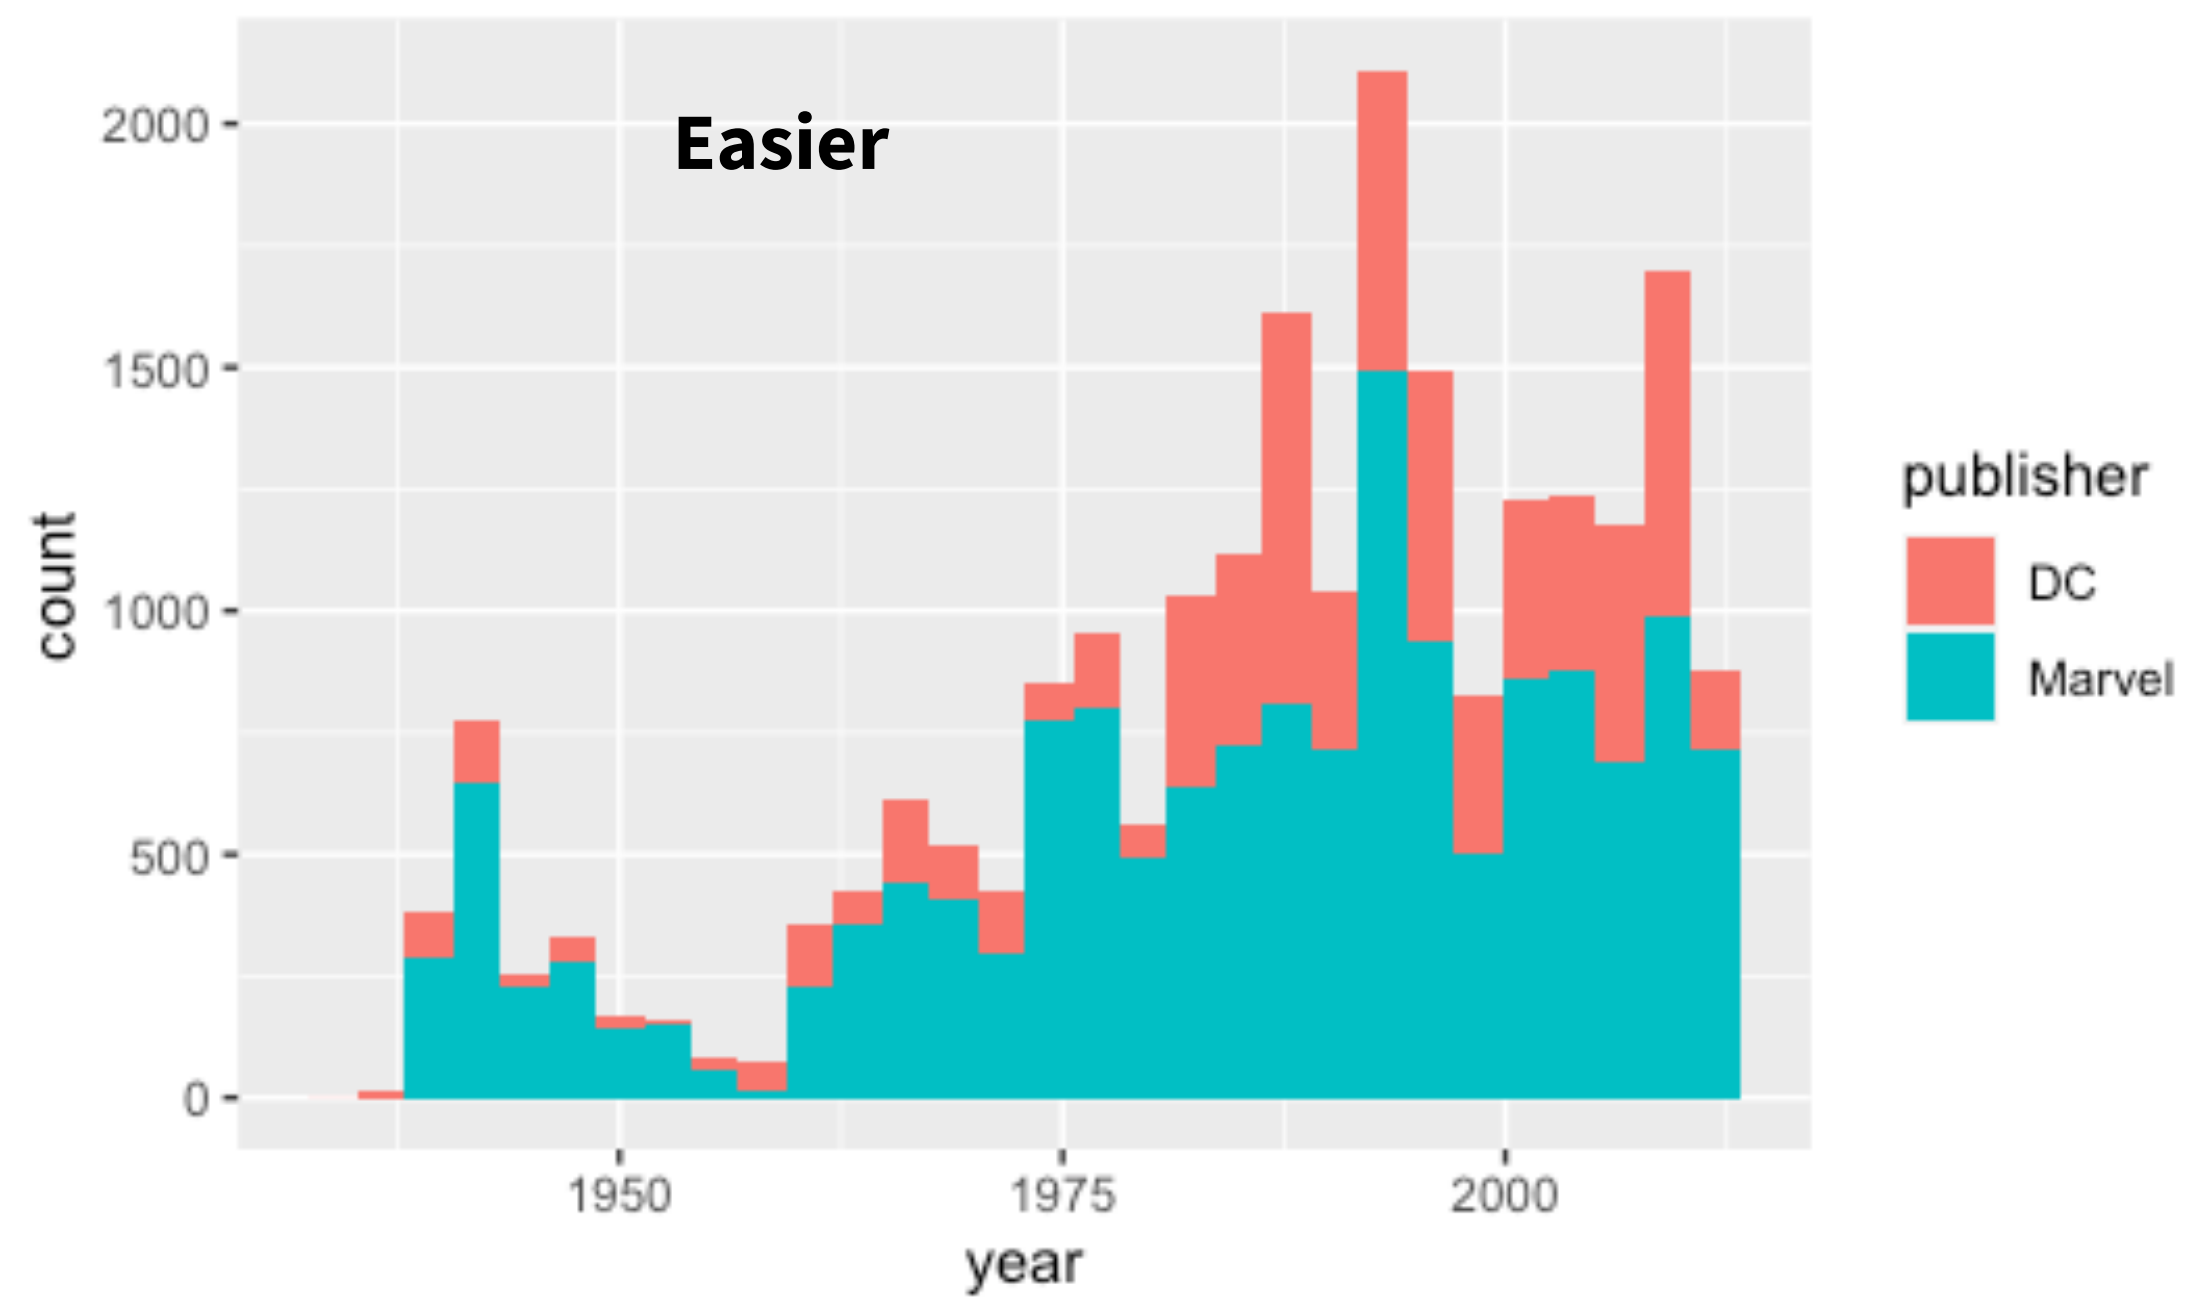

Your Turn 2

Try to make a basic visualization like the FiveThirtyEight graphic.

```
ggplot(comic_characters) +  
  geom_histogram(aes(x = year, fill = publisher))
```

```
ggplot(comic_characters) +  
  geom_histogram(aes(x = year, fill = publisher)) +  
  facet_wrap(~publisher)
```

Controlling the details

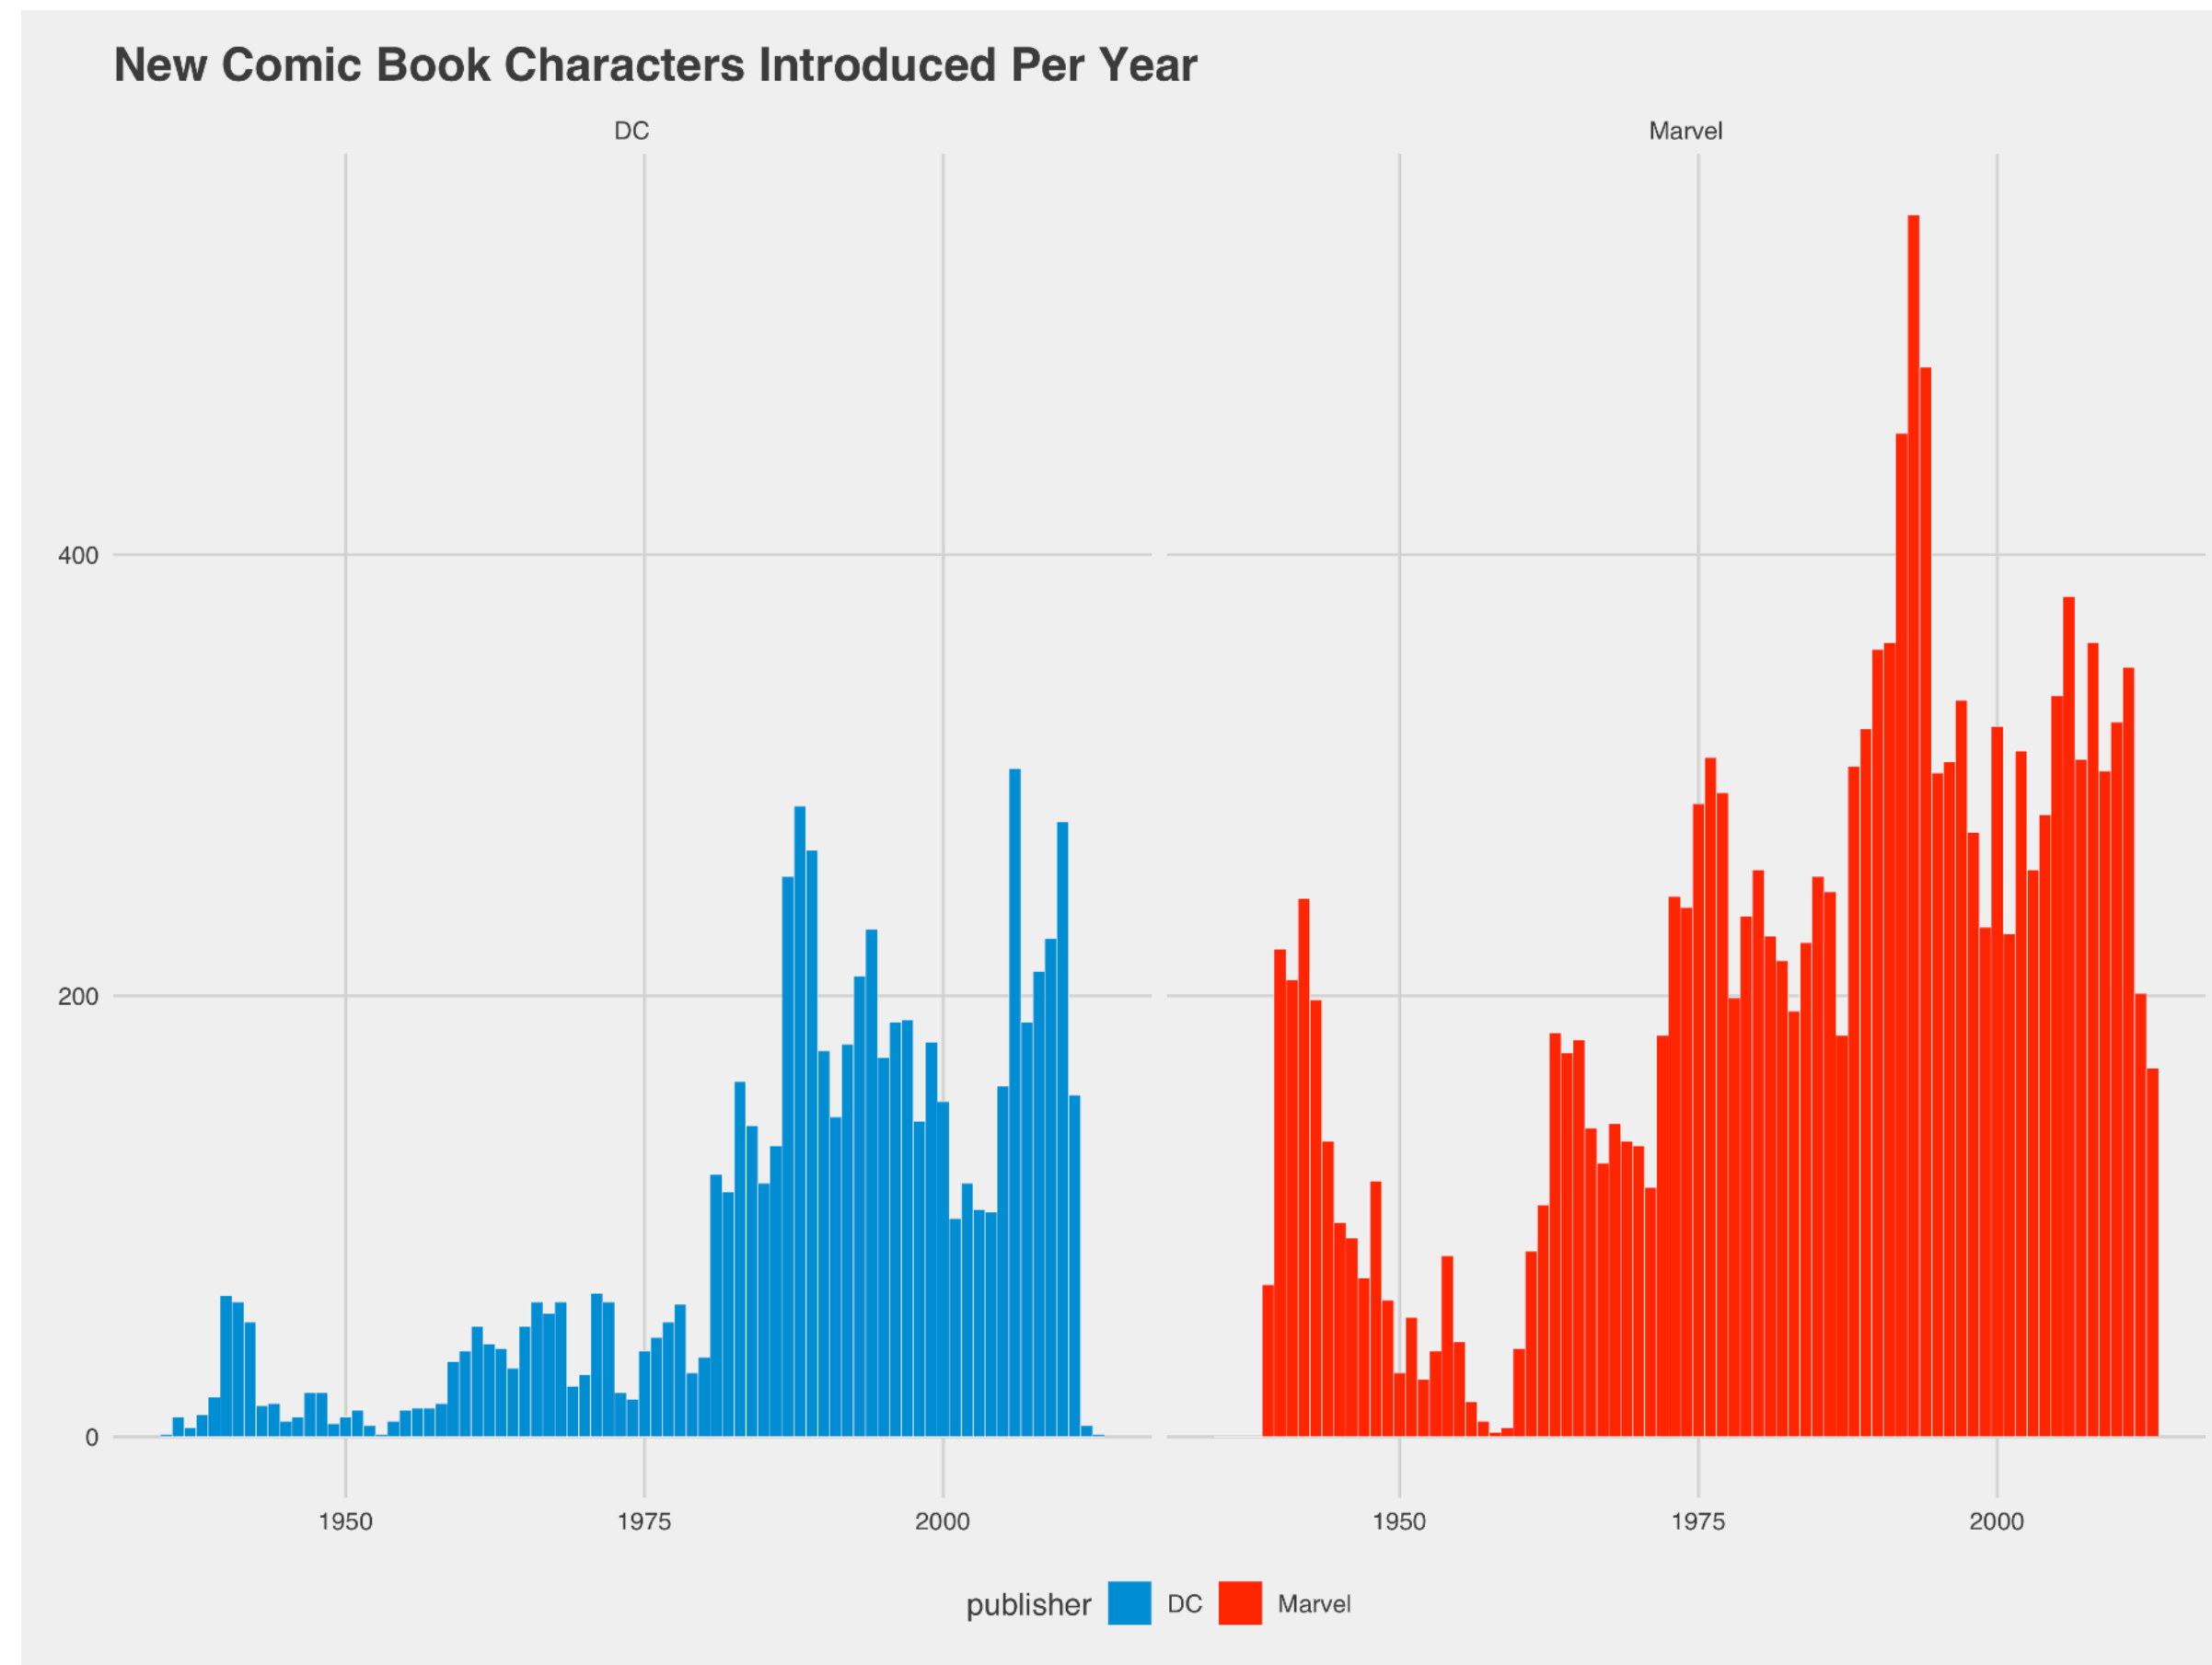

```

p1 <- ggplot(comic_characters) +
  geom_histogram(aes(x = year, fill = publisher),
                binwidth = 1, color = "white", lwd = 0.1) +
  facet_wrap(~publisher) +
  theme_fivethirtyeight() +
  scale_fill_manual(values = c("#008fd5", "#ff2700")) +
  labs(title = "New Comic Book Characters Introduced Per Year")

```

p1

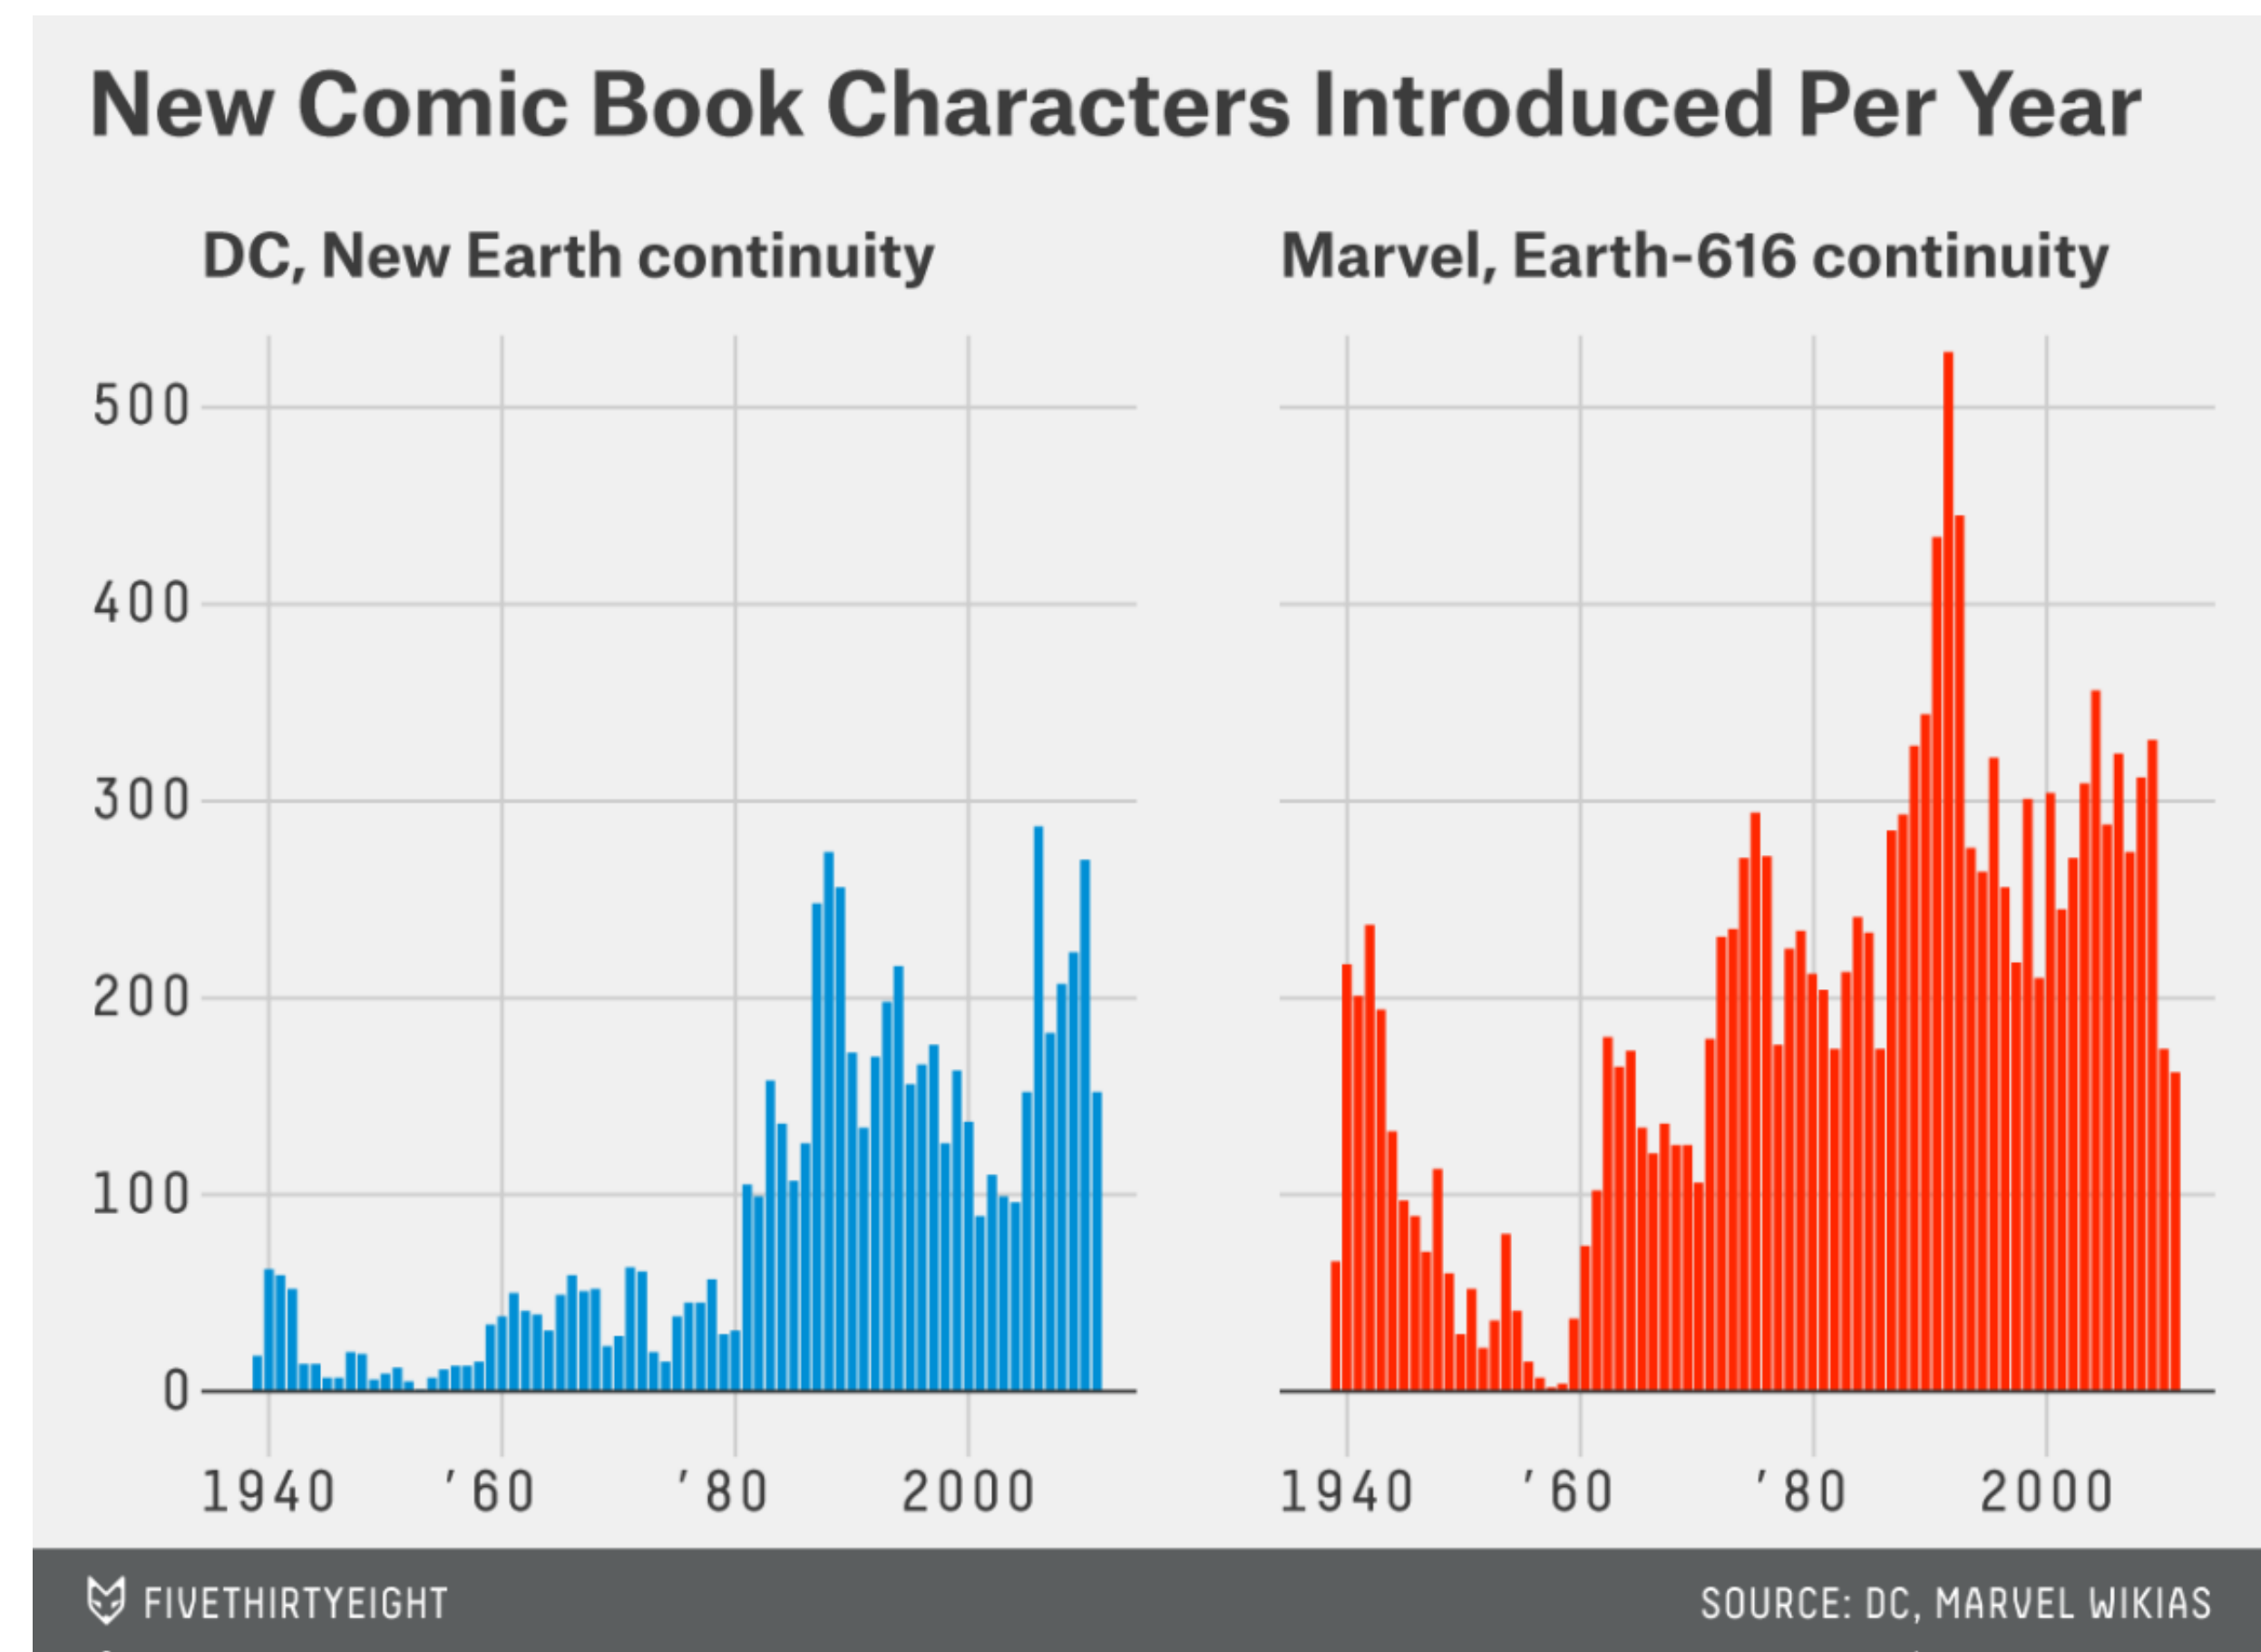

```

publisher_labels <- c(DC = "DC, New Earth continuity",
                      Marvel = "Marvel, Earth-616 continuity")
p1 <- ggplot(comic_characters) +
  geom_histogram(aes(x = year, fill = publisher), binwidth = 1,
                color = "white", lwd = 0.1,
                show.legend = FALSE, alpha = 0.9) +
  facet_wrap(~publisher, labeller = labeller(publisher = publisher_labels)) +
  scale_x_continuous(breaks = seq(1940, 2000, 20),
                    labels = c("1940", "'60", "'80", "2000")) +
  scale_y_continuous(limits = c(0, 555), breaks = seq(0, 500, 100)) +
  scale_fill_manual(values = c("#008fd5", "#ff2700")) +
  geom_hline(yintercept = 0, color = "grey31", size = 0.5) +
  theme_fivethirtyeight() +
  theme(axis.text.y = element_text(size = 13),
        axis.text.x = element_text(size = 13),
        plot.title = element_text(size = 26, hjust = 0.5),
        strip.text.x = element_text(size = 18, hjust = 0, face = "bold"),
        panel.spacing = unit(2, "lines")) +
  labs(title = "New Comic Book Characters Introduced Per Year")

```

p1

Better, but still not quite!

Ugly plot

Today's lab

I'd like you to experiment with themes, scales, position adjustments and other controllable elements.

Take a plot you've made (either today's comic characters or maybe a basic viz) and adjust at least 5 things on it.

I'm borrowing this idea from Allison Horst.

One example: let them do their (data viz) worst

Boldly Going...
to Spaaaaaaaaaaaaaaaaace!!!!!!!!!!
